COMPANION DOCUMENT
SDD-02 System Design & Architecture

PREPARED FOR
Client: AI Employee Platform

PREPARED BY
Development Team

CONFIDENTIAL: prepared for client review and approval. Not for redistribution.

Document Control

Document	PRD-01: Product Requirements Specification & Phased Delivery Plan
Product	AI Employee: 24/7 AI Workforce for Indian Businesses
Version / status	1.0, draft for client approval
Date	14 October 2026
Companion document	SDD-02: System Design & Architecture (technical design of everything listed here)
Source of requirements	Client requirements brief (sections §1-§32) plus decisions confirmed by our team

Revision History

Version	Date	Change
1.0	14 October 2026	First complete issue for client review

How to Read This Document

- **Section 3** lists the rules that apply to every phase (no hard-coding, custom Super Admin, our templates).
- **Section 4** defines the phase gate: a phase exits only after tests, GitHub CI and security checks pass and the client signs off.
- **Section 6** is the complete feature catalogue. Every feature has an ID (e.g., CRM-04), a client reference and a phase.
- **Section 7** is the phase plan. Each phase lists its feature IDs, Super Admin controls, tests and gate criteria.
- **Section 10** traces every client section §1-§32 to features and phases, so nothing is missed.

Reference codes used in the feature catalogue

Code	Meaning
§n	Client requirement section number from the original brief (e.g., §8 = CRM)
DEC	Decision confirmed by our team with the client (e.g., own calendar, Razorpay)
REC	Recommended addition needed for a production-grade SaaS (clearly marked so it can be reviewed)

Phase colour	Meaning
MVP	Phases P0-P8: Minimum Viable Product (client §28)
Post-MVP	Phases P9-P12: all remaining features, also to be built
Pending	Waiting for client definition; not planned or estimated
Future	Separate future project (Flutter mobile app); APIs made ready now

1. Executive Summary

We are building **AI Employee**, a multi-tenant SaaS platform where any Indian business registers, chooses its industry, creates one or more AI Employees, teaches them its approved business information, connects phone, WhatsApp, its built-in CRM and calendar, and lets them handle real work over voice, WhatsApp and website chat: answering and making calls, qualifying leads, matching products, booking appointments, following up and handing hot leads to humans.

The product is positioned as **"Hire an AI Employee for your business"**, not as AI calling software. The long-term vision is **One Platform → Multiple AI Employees → Multiple Industries**. Real Estate is the first market, with Travel and Education included in the MVP; the architecture is industry-independent from day one.

1.1 Scope at a Glance

Release	Phases	What it contains
MVP	P0-P8	Website, registration, multi-tenancy, Super Admin, company panel, template engine, CRM, catalogues, calendar, AI Employee engine, knowledge base, tools, voice (Hindi, English, Bengali), WhatsApp, website chat, handoff, campaigns, dashboards, subscription, usage, security hardening, launch. Templates: Real Estate, Travel, Education.
Post-MVP	P9-P12	Eight more industries, Customer Support and Collection employees, custom roles, eight or more additional languages, usage-based billing, advanced analytics.
Pending	—	AI Marketing Employee: awaiting client definition.

1.2 Delivery Approach

- Work is delivered in **13 phases** (P0-P12). Each phase is built, tested, passed through GitHub CI and security checks, demonstrated on staging and signed off by the client before the next phase starts.
- **No hard-coding:** every business value (industries, fields, statuses, prices, limits, providers, languages, texts) is controlled from the Super Admin panel.
- **Custom panels on our templates:** Super Admin and company panels are built on professional templates supplied by our team; Django's built-in admin is not used.
- **Provider independence:** LLM, speech-to-text, text-to-speech, telephony, WhatsApp, email, SMS and payment providers sit behind adapters and can be replaced from Super Admin.
- **API-first:** every section is built in Django together with its REST APIs, so a future Flutter mobile app (Android + iOS) connects to the same system with the same data and workflows.

Feature count by module

Module	Name	Features
M01	Public Website (Marketing Site)	9
M02	Registration, Authentication & Accounts	11
M03	Multi-Tenancy & Data Isolation	7
M04	Industry Template Engine	8
M05	AI Employee Roles	9
M06	AI Employee Management (Company Panel)	13
M07	AI Employee Engine (Core Runtime)	12
M08	Knowledge Base (AI Business Brain)	11
M09	Tools / Actions Framework	15
M10	CRM & Lead Management (built-in, controlled from Super Admin)	18

Module	Name	Features
M11	Lead Scoring	6
M12	Business Catalogues	8
M13	Calendar & Appointments (built-in)	10
M14	Voice AI	22
M15	WhatsApp	10
M16	Website Chat Widget	7
M17	Human Handoff	5
M18	Call Transcript, Summary & Conversation Records	3
M19	Campaign Management	6
M20	Dashboard & Analytics	6
M21	SaaS Subscription & Plans	6
M22	Usage Tracking & Billing	6
M23	Super Admin Panel	28
M24	Company Panel (General)	7
M25	Security	15
M26	Compliance & Trust Controls	9
M27	Notifications & Communication	3
M28	Mobile Responsiveness	3
M29	Platform Engineering	8
M30	API-First & Mobile App Readiness	8
	Total catalogued features	**289**

2. Confirmed Decisions & Assumptions

The following decisions were confirmed with the client and shape the plan.

#	Topic	Decision
D1	MVP industries	Real Estate, Travel & Tours and Education are all included in the MVP.
D2	CRM	Our own CRM built into the platform, configured and controlled from Super Admin. No external CRM.
D3	Calendar	Our own built-in calendar. No dependency on Google / Outlook calendars.
D4	Telephony accounts	Development and testing on our test account; at launch the client's own provider account is used.
D5	Payment gateway	Razorpay (subscriptions, payments, credit top-ups).
D6	Voice quality	Professional, best-available quality in every language, not only Bengali. Provider chosen per language.
D7	Scope	Everything in the client brief will be built, including features outside the MVP list.
D8	AI Marketing Employee	Kept as a pending feature until the client defines what it does.
D9	Admin panels	Super Admin built fully custom on our admin template; Django built-in admin not used.
D10	Company panel	Professional panel built on the template supplied by our team.
D11	Website	Professional, animated marketing website; company registration starts there.
D12	No hard-coding	All configurable values live in the database and are managed from Super Admin.
D13	Quality gates	Every phase: tests pass → GitHub CI pass → security check pass → gate exit → next phase.
D14	Technology	Python / Django 5.2 LTS backend; website and panels as Django templates on the supplied Bootstrap / jQuery templates (no Next.js); PostgreSQL, Redis, AWS Mumbai (detailed in SDD-02).
D15	API-first / mobile	REST APIs for every section are built in Django alongside each feature. A future Flutter app (Android + iOS) will use the same APIs: same data, same workflows; only mobile design and app code to write.
D16	No separate UI/UX phase	Agreed with the client: no UI/UX designs or prototype are prepared in advance. Development starts directly on the website and admin templates supplied by our team.
D17	Super Admin first	Super Admin (with General Settings and the website content manager) is built first in P1; the website, registration and company panel follow in P2.
D18	Website fully managed	Every section of the website template (headings, text, images, buttons, order, show / hide) is created and edited in Super Admin. Nothing on the website is fixed text.
D19	Theme	Light theme for the website and both panels.
D20	Website template	eSoft (folder WebsiteTemplate), HR layout (index5) as the base design; missing sections taken from other eSoft pages and restyled to match (Section 8).
D21	Admin template	Rizz (folder AdminTemplate) for both Super Admin and the company panel; different sidebar menu and accent colour per panel.
D22	No Next.js	Both templates already ship as Django projects, so pages are Django templates with Bootstrap / jQuery. Business logic sits in a service layer used by both page views and REST APIs.
D23	Free LLM for testing	Development and staging use free LLM tiers via a self-hosted FreeLLMAPI gateway to avoid AI costs for us and the client. Never in production, never with real customer data; final quality and latency tests on the real model (SA-28).

Assumptions to confirm

- MVP roles are Sales, Receptionist, Appointment and Follow-up. Customer Support and Collection follow in P10.
- Travel package and Education course fields (CAT-05, CAT-06) are proposals and will be finalised with the client in P3.
- Field lists for the eight post-MVP industries (Section 7, Phase 9) are proposals, finalised at the start of P9.
- Phase durations and costs are given in the separate commercial proposal.

3. Global Rules (Apply to Every Phase)

3.1 Rule 1: No Hard-coding, Super Admin Controls Everything

No business value is written into source code. Seed values (e.g., the four plans and their prices) are inserted as editable data. Code reads values from the settings registry and configuration tables. Every phase gate includes a **no-hard-coding review**. The table lists what the Super Admin controls.

Area	Controlled from Super Admin
Industries	Industries, templates, versions, activation, instructions, greetings, disclosure texts
AI Employees	Role templates, tools, guardrails, model per task, knowledge limits
CRM	Lead fields per industry, statuses, sources, scoring rules, import limits
Catalogues	Catalogue types and fields (property, package, course, ...)
Calendar	Appointment types, platform holidays, booking defaults
Voice & languages	Languages, STT / TTS provider per language, voices, telephony providers, number pool
Channels	WhatsApp provider, default templates, opt-out keywords, email and SMS providers
Compliance	Calling hours, attempt caps, DND check, recording defaults, retention periods
Commercial	Plans, prices, limits, overage prices, GST, trial days, credits, feature flags
Security	Password, session, lockout and 2FA policy, IP allowlist, upload limits
Website & messages	Website content, legal pages, email and notification templates
General Settings	Platform name, logo, favicon, colours, contact details, social links, footer, SEO, localisation, email sender, maintenance mode (SA-21 to SA-27)

3.2 Rule 2: Custom Super Admin, Django Built-in Admin Not Used

- The Super Admin panel is a fully custom application built on the **admin dashboard template supplied by our team**.
- **django.contrib.admin is not installed** in any environment. All Super Admin screens call the same secured Admin API, with 2FA, IP allowlist and audit logging.
- Each phase delivers the Super Admin screens for the features it builds, so configuration is never left in code "for later".

3.3 Rule 3: Professional Panels and Website on Our Templates

- **No separate UI/UX design phase** (agreed with the client): the website template and admin templates supplied by our team are placed in the project folder and development starts directly on them.
- **Build order:** Super Admin first (P1), then the website, registration and company panel (P2).
- **Company panel** (the registered business's admin) is built on the professional template supplied by our team.
- **Public website** is professional and animated; visitors learn about the product and register their company there.
- **Every website section is managed from Super Admin:** each section of the website template has a Super Admin editor for headings, text, images, icons, buttons and links, order and show / hide. Content is uploaded there; the website only displays it.
- One design language across website, panels and widget; mobile layouts for every screen.

3.4 Rule 4: Company Data Isolation

Every record belongs to one company. Isolation is enforced in three layers (ORM, API, database row-level security) and proven by an automated cross-tenant test suite that must pass at every gate.

3.5 Rule 5: Provider Independence

LLM, STT, TTS, telephony, WhatsApp, email, SMS, embedding and payment providers are accessed only through adapters. Switching provider is a Super Admin configuration change, with fallback providers for critical paths.

3.6 Rule 6: AI Trust Rules

- AI never invents prices, availability, discounts, policies or specifications; it uses approved knowledge and tools only.
- AI identifies itself as an AI assistant.
- When unsure, AI follows the configured fallback: human transfer, callback or message.

3.7 Rule 7: Mobile Responsive Everywhere

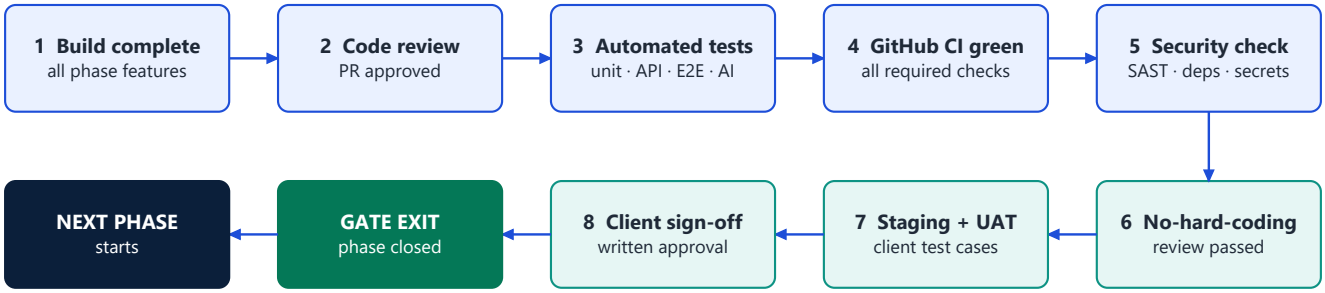

Every screen works on desktop, laptop, tablet, Android and iPhone. Device testing is part of every gate.

3.8 Rule 8: API-First, Ready for the Flutter Mobile App

- Every section is built in Django **together with its REST APIs** in the same phase, not added later.
- The website, company panel and Super Admin use only these APIs, so everything the web can do, an app can do.
- A future **Flutter mobile app (Android + iOS)** will connect to the same APIs: same data, same workflows. Only the mobile design and app-side code will need to be written.
- APIs are versioned (/api/v1), documented in OpenAPI (used to generate the Dart client) and covered by automated API tests at every gate (module M30).

4. Phase Gate Process (Definition of Done)

Each phase ends with a formal gate. Only when every criterion is met does the phase exit and the next phase start. This mirrors the client's request that each milestone be tested and approved before moving on.

Any failure at steps 3-8 → fix → re-run from step 3. A phase cannot exit with a failing check.

Figure 1: Phase gate flow applied at the end of every phase

4.1 Gate Exit Checklist

#	Criterion	Evidence
1	All features of the phase built and demonstrable	Feature checklist with IDs ticked
2	Code reviewed and merged through pull requests	GitHub PR history, approvals
3	Automated tests pass (unit, integration, API, E2E, AI evaluation where relevant); backend coverage ≥ 80 %	CI test report, coverage report
3a	**REST APIs complete** for every feature of the phase, documented in OpenAPI and covered by API tests	Published OpenAPI spec, API test report
4	**GitHub CI pipeline green** on the phase release tag (all required checks)	GitHub Actions run link
5	**Security check passed**: no open critical / high findings	SAST, dependency, secret and container scan reports; DAST report from P1 onward
6	Cross-tenant isolation suite passes	CI test report
7	**No-hard-coding review**: every value introduced is configurable from Super Admin	Signed checklist
8	Device testing on desktop, laptop, tablet, Android, iPhone	Test sheet with screenshots
9	Deployed to staging; client UAT test cases executed	UAT sheet
10	Client written sign-off	Approval email / signed gate form

4.2 Required GitHub CI Checks

Check	Tools	Blocks merge / gate
Backend lint & format	ruff, black --check	Yes
Backend type check	mypy	Yes
Backend tests + coverage	pytest with PostgreSQL and Redis services	Yes
Migrations consistency	manage.py makemigrations --check	Yes
Template & JS lint	djLint (Django templates), eslint (our JavaScript)	Yes
Static build	collectstatic, Rizz compiled assets present, widget size budget	Yes
End-to-end tests	Playwright against staging / preview	Yes (gate)
AI evaluation	Golden conversations per template × language	Yes (from P4)

Check	Tools	Blocks merge / gate
Security scans	Bandit, Semgrep, pip-audit, npm audit, Gitleaks, Trivy	Yes

4.3 Security Check per Phase

- **Static analysis** (SAST) of Python and JavaScript code.
- **Dependency vulnerabilities** for Python and npm packages.
- **Secret scanning**: no keys or passwords in the repository.
- **Container image scan** for OS and library vulnerabilities.
- **Dynamic scan** (OWASP ZAP baseline) against staging from P1.
- **OWASP Top 10 review** of the features added in the phase, including AI-specific risks from P4.
- **External penetration test** before production launch (P8).

5. Users, Roles & Panels

The platform has two panels plus customer-facing surfaces. Admin levels are roles inside the panels, not separate applications.

Surface	Used by	Purpose
Public website	Visitors, prospects	Learn about the product, view pricing, register a company, request a demo
Company panel	Company Owner / Admin, Manager, Human Agent	Run the business's AI Employees, CRM, calendar, inbox, campaigns, billing
Super Admin panel	Platform Super Admin, Support staff	Control the whole platform: companies, templates, providers, plans, settings, logs
Website chat widget	The business's own customers	Chat with the AI Employee on the business website
Phone & WhatsApp	The business's own customers	Talk to the AI Employee by call or WhatsApp

5.1 Default Permission Matrix

Defaults below; permission sets are stored in the database and editable from Super Admin.

Capability	Super Admin	Support	Owner / Admin	Manager	Human Agent
Platform settings, providers, plans, templates	Full	—	—	—	—
Companies & users (platform-wide)	Full	View	—	—	—
Company profile, billing, subscription	Full	View	Full	—	—
Team & roles	Full	View	Full	—	—
AI Employees (create, edit, activate)	View / pause	View	Full	Full	—
Knowledge base	View	View	Full	Full	View
Leads / CRM	View (audited)	View (audited)	All	All	Assigned only
Calendar & appointments	View	View	All	All	Own
Conversations & transcripts	View (audited)	View (audited)	All	All	Assigned only
Call recordings	Configurable	—	Listen / download	Configurable	Listen (assigned)
Campaigns	View	View	Full	Full	—
Inbox takeover & handoff	—	—	Yes	Yes	Yes
Analytics	All companies	View	All	All	Own performance
Data export	Full	—	Yes	Configurable	—

6. Complete Feature Catalogue

Every feature requested by the client, plus clearly marked production essentials, with its fields, client reference and delivery phase. Feature IDs are used in the phase plan, tests and sign-off sheets.

6.1 M01 · Public Website (Marketing Site)

Professional, animated, responsive website where visitors learn about the product and register their company.

ID	Feature	Details & fields	Ref	Phase
WEB-01	**Animated landing page**	Hero built on the positioning **"Hire an AI Employee for your business"**. Built on the eSoft HR layout (index5). Scroll-triggered animations (GSAP, ScrollTrigger, AOS), animated product mock-ups (AI Employee card, live call transcript, CRM board), micro-interactions and smooth transitions. Performance budget: Lighthouse score 90 or above so animation never slows the page.	DEC, §31	**P2**
WEB-02	**Website pages**	Home · How It Works (Register → Select Industry → Select Employee Type → Create → Add Knowledge → Connect → Configure → Activate → AI Employee works) · AI Employee Types · Industries (one page per *active* industry, generated from Super Admin templates) · Features (Voice, WhatsApp, Website Chat, CRM, Calendar, Campaigns, Analytics) · Pricing (plans read live from Super Admin) · About · Contact / Book a Demo · FAQ.	§1-§3, §23	**P2**
WEB-03	**Legal pages**	Terms of Service, Privacy Policy, Refund & Cancellation Policy, Acceptable Use / AI Usage Policy, Contact details. Required for Razorpay merchant activation. Content editable from Super Admin.	REC	**P2**
WEB-04	**Website content management (Super Admin)**	**Every section of the website template** (hero, features, how it works, AI Employee types, industries, pricing, testimonials, FAQ, call-to-action, header menu, footer and every other section the template has) gets its own Super Admin editor: headings, sub-headings, paragraphs, images, icons, buttons (text + link), lists / cards, display order, show / hide. Plus per-page SEO meta and legal pages. Built first in Super Admin; the website reads everything from it. No hard-coded website content.	DEC	**P1**
WEB-09	**Section-by-section mapping of the template**	Each section in the supplied website template is mapped to a content model in Super Admin before development, so nothing on the website is left as fixed template text.	DEC	**P0, P1**
WEB-05	**Company registration entry**	"Get Started" / "Register your business" calls-to-action open the company registration flow (AUTH-01).	§1	**P2**
WEB-06	**Contact / demo enquiries**	Form fields: Name, Business name, Phone, Email, Industry, Message. Stored in Super Admin → Platform Enquiries with email notification to the platform team.	REC	**P2**
WEB-07	**SEO & performance**	Server-side rendering, meta and OpenGraph tags, sitemap.xml, robots.txt, structured data, optimised images, CDN delivery.	REC	**P2**
WEB-08	**Responsive & accessible**	Desktop, laptop, tablet, Android and iPhone. Keyboard navigation, colour contrast, and reduced-motion mode for users who disable animations.	§26	**P2**

6.2 M02 · Registration, Authentication & Accounts

How a business creates its account, how users sign in and how teams are managed.

ID	Feature	Details & fields	Ref	Phase
AUTH-01	**Company registration**	Fields: **Business name**; **Owner full name**; **Work email**; **Mobile number** (+91 default); **Password** (policy from Super Admin); **Industry** (active templates only); **City**; **State**; Business size (optional); Website (optional); GSTIN (optional, printed on invoices); **Accept Terms & Privacy** (stored with timestamp and IP). Creates the Company, the Owner user and a trial or plan according to Super Admin settings.	§1, §28	**P2**
AUTH-02	**Verification**	Email verification (link or OTP). Mobile OTP verification, switchable on/off in Super Admin; SMS sent through the SMS provider adapter.	REC	**P2**
AUTH-03	**Login & sessions**	Email + password login, remember-me, logout, configurable session timeout, list and revoke active sessions.	§25	**P1**
AUTH-04	**Password recovery**	Forgot password (email link / OTP), reset password, change password from profile.	§25	**P1**
AUTH-05	**Two-factor authentication**	Authenticator-app (TOTP) 2FA. Mandatory for Super Admin staff; optional or enforceable per company.	§25	**P1**
AUTH-06	**Brute-force protection**	Lockout after N failed attempts plus rate limiting per IP and account. N and lock duration configurable in Super Admin.	§25	**P1**
AUTH-07	**Team management**	Invite users by email, assign role (Owner/Admin, Manager, Human Agent), resend or cancel invitation, deactivate user, transfer ownership. Seat limit enforced from the plan.	§8, §16	**P2**
AUTH-08	**User profile**	Name, email, mobile, photo, timezone (default Asia/Kolkata), notification preferences, availability status for handoff (Online / Away / Offline), password and 2FA settings.	REC	**P1**
AUTH-09	**Company profile**	Display name, legal name, logo, address, GSTIN, contact email and phone, website, timezone, default language, business hours, holidays.	§1	**P2**
AUTH-10	**Onboarding checklist**	Guided checklist after registration: Create AI Employee → Add knowledge → Connect phone / WhatsApp → Test → Activate. Progress tracked per company.	§1	**P2**
AUTH-11	**Role-based access control**	Permission check on every screen and every API call. Roles and permission sets stored in the database and editable in Super Admin (defaults in Section 5).	§25	**P1**

6.3 M03 · Multi-Tenancy & Data Isolation

Thousands of businesses share one platform; none can ever see another's data.

ID	Feature	Details & fields	Ref	Phase
TEN-01	**Company-level isolation**	Every business record carries **company_id**. Enforced in the ORM, the API layer and by PostgreSQL row-level security. One company can never read or change another company's data.	§8, §25, §32	**P1**
TEN-02	**Tenant resolution per channel**	Company identified from the signed-in user (panels), the dialled number (calls), the WhatsApp number (messages) or the widget key (website chat). Never taken from AI output.	§25	**P1**
TEN-03	**Isolated file storage**	Files stored under per-company paths in private storage; accessed only through short-lived signed URLs.	§25	**P1**
TEN-04	**Isolated AI knowledge**	Knowledge search always filtered by company. AI tools receive company_id from the server-side session only.	§6, §25	**P4**
TEN-05	**Automated isolation tests**	Cross-tenant test suite covering every API endpoint runs in CI. Any failure blocks the phase gate.	§25	**P1 → all**

ID	Feature	Details & fields	Ref	Phase
TEN-06	**Company suspension**	Super Admin can suspend or reactivate a company. Suspension pauses all its AI Employees, campaigns and logins.	§22	**P1**
TEN-07	**Data export & deletion**	Owner can request a full data export or account deletion (configurable grace period). Deletion covers records, files, recordings, knowledge vectors and backups per retention policy.	§25	**P7**

6.4 M04 · Industry Template Engine

Reusable engine so any industry can be added from Super Admin without changing source code.

ID	Feature	Details & fields	Ref	Phase
IND-01	**Industry management**	Super Admin creates industries: Name, Slug, Icon, Description, Display order, Status (Active / Inactive), Supported languages.	§2, §22	**P3**
IND-02	**Template contents**	Each industry template defines: AI persona guidelines and base instructions; qualification questions (ordered, mapped to CRM fields); CRM custom fields; catalogue type(s) and fields; appointment types; enabled tools; lead statuses; lead-scoring rules; handoff rules; greeting and AI-disclosure text per language; default WhatsApp templates; default FAQs.	§2	**P3**
IND-03	**Template versioning**	Draft → Published → Archived. Companies stay on their version until they accept an update. Rollback to a previous version.	REC	**P3**
IND-04	**Activate / deactivate**	Inactive templates are hidden from registration and from the AI Employee wizard; existing companies keep working.	§22	**P3**
IND-05	**Clone template**	Create a new industry by cloning an existing template. No code change.	§2	**P3**
IND-06	**MVP templates**	**Real Estate**, **Travel & Tours**, **Education**: fully configured, AI-tuned and tested.	§11-§13, §28	**P3, P4**
IND-07	**Post-MVP templates**	Automobile, Hotels, E-commerce, Logistics, Clinics / Healthcare, B2B Services, Salons / Beauty, Restaurants.	§2	**P9**
IND-08	**Future industries**	Any further industry added from Super Admin with the same engine.	§2, §32	**P9+**

6.5 M05 · AI Employee Roles

Role templates define what kind of work an AI Employee does.

ID	Feature	Details & fields	Ref	Phase
ROLE-01	**Role template management**	Super Admin defines roles: Name, Description, Icon, Role instructions, Allowed channels (inbound voice, outbound voice, WhatsApp, website chat), Allowed tools, Default rules, Plan availability, Status.	§3, §22	**P3**
ROLE-02	**AI Sales Employee**	Call leads · explain products/services · qualify customers · follow up · create CRM leads · transfer hot leads.	§3	**P4**
ROLE-03	**AI Receptionist**	Answer incoming calls · answer approved FAQs · take messages · transfer calls · create appointments.	§3	**P4**
ROLE-04	**AI Appointment Employee**	Check availability · book · reschedule · cancel · send reminders.	§3	**P4**
ROLE-05	**AI Follow-up Employee**	Call leads · follow up · update CRM · escalate interested customers.	§3	**P4**
ROLE-06	**AI Customer Support Employee**	Answer customer questions · check order/status where integrated · create support tickets · escalate complex issues.	§3	**P10**

ID	Feature	Details & fields	Ref	Phase
ROLE-07	**AI Collection / Reminder Employee**	Payment reminders · due-date notifications · human escalation. Enabled per company by Super Admin only where legally and contractually appropriate; strict tone guardrails.	§3	**P10**
ROLE-08	**Custom role builder**	Companies (if plan allows) or Super Admin create new roles from instructions, tools, channels and rules.	§3, §31	**P10**
ROLE-09	**AI Marketing Employee**	**PENDING**: the client has not yet defined this role. Not planned or estimated until defined (see Section 9).	§31	**Pending**

6.6 M06 · AI Employee Management (Company Panel)

Screens a business uses to create, configure, test and run its AI Employees.

ID	Feature	Details & fields	Ref	Phase
EMP-01	**My AI Employees page**	Card per employee showing **Name, Industry, Role, Language(s), Status, Calls, Leads, Appointments**. Buttons: **Edit, Settings, Knowledge, Calls, Analytics, Activate / Pause**. Search, status filter, empty-state guidance.	§20	**P4**
EMP-02	**Wizard step 1: Select Industry**	Pre-selected from the company's industry; only active templates listed.	§21	**P4**
EMP-03	**Wizard step 2: Select Employee Type**	Roles available for the industry and the company's plan.	§21	**P4**
EMP-04	**Wizard step 3: Employee Name**	Name (e.g., Sara), avatar, persona description, tone (formal / friendly), greeting message per language.	§21	**P4**
EMP-05	**Wizard step 4: Voice**	Voices per language from Super Admin (gender, style), audio preview, speaking speed.	§21	**P4, P5**
EMP-06	**Wizard step 5: Languages**	Primary language plus additional languages; automatic detection and switching; code-mixed speech allowed.	§21	**P4**
EMP-07	**Wizard step 6: Business Knowledge**	Select existing knowledge sources or upload new ones; restrict sources to this employee.	§21	**P4**
EMP-08	**Wizard step 7: Connect Tools**	**Phone** number · **WhatsApp** number · **CRM** (built-in: pipeline and assignment rules) · **Calendar** (built-in: calendars/resources this employee may book).	§21	**P4 (CRM, Calendar), P5 (Phone), P6 (WhatsApp)**
EMP-09	**Wizard step 8: Configure Rules**	Working hours and after-hours behaviour · maximum call duration · transfer targets and escalation triggers · fallback message · AI-disclosure text · recording on/off and consent message · follow-up rules · qualification questions (edit / reorder) · restricted topics · enabled tools.	§21	**P4**
EMP-10	**Wizard step 9: Test AI**	Test console: text chat, browser voice test, test call to own number. Shows extracted fields, tool calls and knowledge used.	§21, §29	**P4 (text), P5 (voice)**
EMP-11	**Wizard step 10: Activate**	Readiness checklist (approved knowledge, connected channel, test completed), plan-limit check, activation.	§21	**P4**
EMP-12	**Edit, settings, pause**	Edit any step later; activate/pause instantly; archive. Every change saved as a configuration version (who / when / what).	§20	**P4**
EMP-13	**Employee analytics**	Calls, connected, leads, qualified, hot, appointments, transfers, usage, per employee with date filter.	§20	**P7**

6.7 M07 · AI Employee Engine (Core Runtime)

One engine powers every AI Employee, in every industry, on every channel.

ID	Feature	Details & fields	Ref	Phase
ENG-01	**One engine, all channels**	A single channel-independent engine runs voice, WhatsApp and website chat for every industry and role.	§2, §31	**P4**
ENG-02	**Layered configuration**	Behaviour assembled from: platform guardrails → industry template → role → company profile → employee settings → approved knowledge → conversation state.	§2	**P4**
ENG-03	**Tool calling**	AI decides which configured tool to call; the server validates input, injects company_id, executes and returns the result.	§7	**P4**
ENG-04	**No invented facts**	Prices, availability, discounts, policies and specifications come only from approved knowledge or tools. If missing, the configured fallback applies (human transfer, callback, or message). Verified by automated tests.	§6	**P4**
ENG-05	**AI disclosure**	AI identifies itself as an AI assistant at the start of each conversation (text per language, configurable).	§4	**P4**
ENG-06	**Structured extraction**	Free speech converted into CRM fields, e.g. "*Sir mujhe New Town mein 2BHK chahiye, budget around 70 lakh hai*" → Location = New Town, BHK = 2, Budget = ₹70,00,000. Understands lakh, crore, k and Indian date expressions.	§5	**P4**
ENG-07	**Mixed-language understanding**	Hinglish, Bengali-English and other code-mixed input; replies in the customer's language.	§4, §5	**P4 (text), P5 (voice)**
ENG-08	**Returning-customer memory**	Recognises known numbers and uses earlier summaries and CRM data.	REC	**P4**
ENG-09	**LLM provider independence**	LLM provider and model per task chosen in Super Admin, with automatic fallback provider.	§27	**P4**
ENG-10	**Safety guardrails**	Prompt-injection resistance, restricted topics, abuse handling, no promises outside policy, personal data masked in logs.	§25	**P4**
ENG-11	**Usage metering**	Tokens / credits recorded per company, employee and conversation.	§24	**P4**
ENG-12	**Quality evaluation suite**	Golden test conversations per industry × role × language run in CI to catch regressions in grounding, extraction, tool use and handoff.	§29	**P4 → all**

6.8 M08 · Knowledge Base (AI Business Brain)

Each business teaches its AI Employees using only approved business information.

ID	Feature	Details & fields	Ref	Phase
KB-01	**Website source**	Add URL; crawler with page and depth limits; scheduled re-sync; include/exclude pages.	§6	**P4**
KB-02	**Document sources**	PDF and DOC/DOCX upload; size and count limits from plan.	§6	**P4**
KB-03	**FAQs**	Question & answer editor, bulk import, per language.	§6	**P4**
KB-04	**Approved text**	Rich-text entries for service information, policies and price information.	§6	**P4**
KB-05	**Excel / CSV & product catalogue**	Catalogues and price lists imported as structured records for exact lookup, never guessed from text.	§6	**P4**
KB-06	**Approval workflow**	Each source is **Draft** until a company admin marks it **Approved**. AI uses approved content only.	§6	**P4**
KB-07	**Processing status**	Queued → Processing → Ready / Failed (with reason). Re-process; delete (removed from AI immediately).	REC	**P4**

ID	Feature	Details & fields	Ref	Phase
KB-08	**Knowledge scope**	Company-wide, or limited to selected AI Employees.	§6	**P4**
KB-09	**Knowledge test**	Ask a question; see the answer and the exact sources used.	§6	**P4**
KB-10	**Unanswered-questions report**	Questions the AI could not answer, grouped and counted, so the business can add knowledge.	REC	**P4**
KB-11	**Source citations**	Each AI answer records which knowledge items were used (visible in transcript view).	§6	**P4**

6.9 M09 · Tools / Actions Framework

Actions the AI Employee performs in the real system, configured per industry and per employee.

ID	Feature	Details & fields	Ref	Phase
TOOL-01	**Tool registry**	Super Admin manages tools: Key, Description, Input schema, Category, Allowed industries / roles, Status. Industry-specific tools are configuration.	§7	**P4**
TOOL-02	**create_lead() / update_lead()**	Create or update a lead including custom fields and status.	§7	**P4**
TOOL-03	**search_customer()**	Find an existing lead/customer by phone, name or email (own company only).	§7	**P4**
TOOL-04	**search_product()**	Search the company catalogue (properties, packages, courses …) with filters.	§7	**P4**
TOOL-05	**check_availability() / book_appointment() / reschedule_appointment() / cancel_appointment()**	Built-in calendar actions with double-booking protection.	§7	**P4**
TOOL-06	**assign_salesperson()**	Assign the lead to a human agent using assignment rules.	§7	**P4**
TOOL-07	**send_email()**	Send an approved email template (brochure, confirmation, summary).	§7	**P4**
TOOL-08	**transfer_call()**	Warm or cold transfer to a human.	§7	**P5**
TOOL-09	**send_whatsapp()**	Send an approved WhatsApp template or session message.	§7	**P6**
TOOL-10	**create_ticket()**	Create a support ticket.	§7	**P10**
TOOL-11	**get_order_status()**	Order / status lookup through the company's integration (API connector or imported data).	§7	**P10**
TOOL-12	**External API connector**	Company connects its own system (HTTPS + authentication) as a custom tool.	§7	**P10**
TOOL-13	**Per-employee tool control**	Enable / disable tools per AI Employee; Super Admin can disable a tool platform-wide.	§7	**P4**
TOOL-14	**Tool execution log**	Inputs, outputs, status and duration recorded per conversation; visible to company admin and Super Admin.	§25	**P4**
TOOL-15	**MVP industry tools**	**Real Estate:** search_property, match_properties, book_site_visit. **Travel:** search_packages, create_booking_enquiry. **Education:** search_courses, check_eligibility, book_counselling.	§11-§13	**P4**

6.10 M10 · CRM & Lead Management (built-in, controlled from Super Admin)

Every company gets its own CRM inside the platform. No external CRM is required.

ID	Feature	Details & fields	Ref	Phase
CRM-01	**Lead record: common fields**	**Lead ID** (auto, per company, e.g. LD-000123) · **Name** · **Phone** · **Email** · **Source** · **Lead Status** · **Lead Score** · **Assigned Employee** (AI) · **Assigned Human Agent** · **Notes** · **Call History** · **Follow-up Date** · **Last Contact** · **Next Action**. Also: Preferred language, Tags, Consent / opt-out flag, Created / Updated.	§8	**P3**
CRM-02	**Lead statuses**	NEW · CALLING · CONNECTED · QUALIFIED · HOT · WARM · COLD · FOLLOW-UP · APPOINTMENT · CONVERTED · NOT INTERESTED. Seeded defaults; label, colour and order editable in Super Admin; automatic transitions on AI events.	§8	**P3**
CRM-03	**Lead sources**	Inbound Call, Outbound Campaign, WhatsApp, Website Chat, Manual, Import. List managed in Super Admin.	§8	**P3**
CRM-04	**Dynamic custom fields**	Industry fields without code change. Types: text, number, currency (INR), date, date-time, single select, multi select, yes/no, phone, email, location, file. Properties: label, key, required, AI-extractable, filterable, show in list, order, help text, validation. Defaults per industry from Super Admin; companies may add their own fields (plan-gated).	§9	**P3**
CRM-05	**Real Estate fields**	Budget · Location · BHK · Property Type · Purpose · Site Visit.	§9	**P3**
CRM-06	**Travel fields**	Destination · Travel Date · Passengers · Budget · Package.	§9	**P3**
CRM-07	**Education fields**	Course · Qualification · Preferred College · Admission Requirement.	§9	**P3**
CRM-08	**Automobile fields**	Car Model · Budget · Variant · Test Drive.	§9	**P9**
CRM-09	**Lead list**	Table view (desktop), card view (mobile); search; filters (status, score, source, assignee, AI employee, dates, custom fields); sort; saved views; pagination.	§8, §26	**P3**
CRM-10	**Pipeline board**	Kanban board by status with drag-and-drop.	REC	**P3**
CRM-11	**Lead detail**	Profile and custom fields; timeline of calls, WhatsApp, chats, emails, notes, status and score changes, appointments, handoffs; AI summaries; transcript and recording access; next action; follow-up scheduler.	§8, §17	**P3 (+P5, P6)**
CRM-12	**Manual create / edit**	Create, edit, soft-delete, restore.	§8	**P3**
CRM-13	**Import / export**	CSV / Excel import with column mapping, phone normalisation, duplicate detection and error report. Export permission-controlled and audit-logged.	§8, §18	**P3**
CRM-14	**Duplicate management**	Detect duplicates by phone / email; merge leads.	REC	**P3**
CRM-15	**Assignment**	Manual, round-robin, rule-based (e.g., by location or project), or by AI (assign_salesperson).	§3, §7	**P3**
CRM-16	**Follow-up tasks**	Tasks for humans with due date and reminders; "My follow-ups today" list.	§8	**P3**
CRM-17	**Bulk actions**	Assign, change status, add to campaign, add tag, export, delete.	REC	**P3**
CRM-18	**Super Admin control**	Statuses, sources, default fields, scoring rules and import limits configured by Super Admin. The CRM lives entirely inside our platform.	DEC	**P3**

6.11 M11 · Lead Scoring

Automatic HOT / WARM / COLD classification with admin-configurable rules.

ID	Feature	Details & fields	Ref	Phase
SCORE-01	**Automatic classification**	After every conversation or event: **HOT** = strong buying intent / appointment / immediate requirement; **WARM** = interested but not ready; **COLD** = low intent / general enquiry.	§10	**P4**
SCORE-02	**Configurable rules**	Rule builder with conditions on fields and events, points and thresholds (e.g., appointment booked +40, budget given +10, timeline under 30 days +20, "not interested" → COLD). Industry defaults in Super Admin; company admin can adjust.	§10	**P3**
SCORE-03	**AI intent signal**	AI-assessed intent combined with rules; numeric score 0-100 plus label.	§10	**P4**
SCORE-04	**Score explanation**	Reason stored, e.g. "Booked site visit, budget confirmed".	REC	**P4**
SCORE-05	**Hot-lead actions**	Configurable: notify human, auto-transfer, assign salesperson.	§3, §16	**P6**
SCORE-06	**Score history**	Every change logged on the lead timeline.	REC	**P4**

6.12 M12 · Business Catalogues

Structured business data the AI searches: properties, packages, courses and future catalogues.

ID	Feature	Details & fields	Ref	Phase
CAT-01	**Catalogue engine**	Catalogue types and their fields defined in Super Admin per industry (same field engine as CRM). Companies manage their own items. New catalogue types need no code change.	§2, §11	**P3**
CAT-02	**Real Estate property database**	**Project Name · Builder · Location · Address · Property Type · BHK · Price · Area · Floor · Possession · Amenities · Photos · Description · Availability · Booking Status**.	§11	**P3**
CAT-03	**Property matching**	Budget (± tolerance configurable), location (with nearby-area aliases), BHK, property type, possession; ranked results.	§11	**P4**
CAT-04	**Property collections**	Named sets of properties (manual or by filter) used by campaigns and WhatsApp follow-ups.	§18	**P3**
CAT-05	**Travel package catalogue**	Proposed fields: Package Name, Destination(s), Duration (days / nights), Price per person, Inclusions, Exclusions, Itinerary, Available Dates, Photos, Status. Finalised with client during P3.	§12	**P3**
CAT-06	**Education course catalogue**	Proposed fields: Course Name, College / Institution, Eligibility, Fees, Duration, Intake / Admission Dates, Seats, Mode, Description, Status. Fees quoted only from this approved data.	§13	**P3**
CAT-07	**Import & media**	Excel / CSV import with mapping; photo and brochure upload; bulk edit.	§6, §11	**P3**
CAT-08	**Indian price formatting**	INR with Indian formatting (₹70,00,000 · 70 Lakh · 1.2 Cr).	REC	**P3**

6.13 M13 · Calendar & Appointments (built-in)

The platform's own calendar. No external calendar dependency.

ID	Feature	Details & fields	Ref	Phase
CAL-01	**Built-in calendar**	Day, week, month and agenda views; mobile friendly.	DEC	**P3**
CAL-02	**Calendar resources**	Human agents, sites / projects, counsellors, rooms: anything bookable.	DEC	**P3**
CAL-03	**Availability rules**	Working hours per resource, breaks, slot length, buffer, maximum bookings per slot, minimum notice, booking window, holidays and leave.	§3	**P3**

ID	Feature	Details & fields	Ref	Phase
CAL-04	**Appointment types**	From the industry template: Site Visit (Real Estate), Counselling Session (Education), Travel Consultation (Travel), Test Drive (Automobile, P9) and so on.	§11-§13	**P3**
CAL-05	**Appointment record**	ID, Lead, Type, Resource / assigned human, Date & time, Duration, Location or meeting link, Status (Scheduled, Confirmed, Rescheduled, Cancelled, Completed, No-show), Notes, Created by (AI Employee / human), Channel.	§17	**P3**
CAL-06	**AI booking tools**	check_availability, book, reschedule, cancel. Double booking prevented at database level.	§3, §7	**P4**
CAL-07	**Confirmations & reminders**	WhatsApp and email confirmation; reminders at configurable offsets (e.g., 24 h and 2 h before).	§3, §14	**P6**
CAL-08	**Manual booking**	Humans create, edit and cancel appointments.	REC	**P3**
CAL-09	**Holiday calendar**	Platform holidays set by Super Admin; company holidays by company admin.	DEC	**P3**
CAL-10	**Notifications to humans**	New or changed bookings notified to the assigned human.	§16	**P6**

6.14 M14 · Voice AI

Natural, low-latency phone conversations in Indian languages.

ID	Feature	Details & fields	Ref	Phase
VOICE-01	**Inbound calls**	AI Employee answers calls on its connected number.	§4	**P5**
VOICE-02	**Authorized outbound calls**	From campaigns, scheduled follow-ups or "Call now". Consent, opt-out and calling-hour checks before every dial.	§4	**P5**
VOICE-03	**Real-time pipeline**	Customer → Telephony → Speech-to-Text → AI Agent → Knowledge + Database → Tools / APIs → Text-to-Speech → Customer, streamed end-to-end.	§5	**P5**
VOICE-04	**Low latency**	Target response time P50 ≤ 1.2 s and P95 ≤ 2.0 s from the end of customer speech (validated in the Phase 0 proof of concept).	§5	**P5**
VOICE-05	**Natural conversation**	Turn detection, short acknowledgements, filler while a tool runs ("ek second, main check karti hoon").	§4, §5	**P5**
VOICE-06	**Interruption / barge-in**	Customer can interrupt; AI stops speaking immediately and listens.	§4	**P5**
VOICE-07	**MVP languages**	Hindi, English, Bengali, including code-mixed speech.	§4	**P5**
VOICE-08	**Professional quality in every language**	STT / TTS provider and voice chosen per language from Super Admin. Phase 0 bake-off compares providers per language on accuracy, naturalness and latency.	DEC	**P0, P5**
VOICE-09	**Voice catalogue**	Voices per language (gender, style, sample) managed in Super Admin.	§22	**P5**
VOICE-10	**AI identification**	AI introduces itself as an AI assistant (configurable text per language).	§4	**P5**
VOICE-11	**Call transfer**	Warm transfer with spoken / on-screen summary to the human; cold transfer fallback; if no human is available, take a message and create a callback task.	§4, §16	**P5**
VOICE-12	**Call recording**	On/off per company and employee; consent announcement; retention days; listen / download permissions; every access audited.	§17	**P5**
VOICE-13	**Transcript**	Speaker-labelled, time-stamped transcript stored for every call.	§4, §17	**P5**

ID	Feature	Details & fields	Ref	Phase
VOICE-14	**Post-call analysis**	Call duration · transcript · summary · customer requirement · lead score · sentiment / intent (only above confidence threshold) · follow-up requirement · appointment details · transfer status · outcome.	§17	**P5**
VOICE-15	**Call logs**	List with filters; detail with recording player, transcript, summary, extracted fields and tool calls.	§17	**P5**
VOICE-16	**Phone-number management**	Connect provider numbers, assign to an AI Employee, inbound routing. Development uses our test account; launch uses the client's own account.	DEC	**P5**
VOICE-17	**Voicemail & no-answer handling**	Detect voicemail / busy / no-answer and apply retry rules.	§18	**P5**
VOICE-18	**Call limits**	Maximum concurrent calls per company (plan), maximum duration, daily caps, calling hours.	§18	**P5**
VOICE-19	**Browser test call**	Test the AI Employee by voice from the browser.	§21	**P5**
VOICE-20	**Add languages without code**	New language = Super Admin configuration (code, STT / TTS mapping, voices, greeting and disclosure texts) + quality test.	§4	**P5 (mechanism), P11**
VOICE-21	**Provider failover**	Secondary STT / TTS / LLM used automatically when a provider fails.	§27	**P5**
VOICE-22	**Voice quality metrics**	Per call: latency per stage, recognition confidence, interruptions, silences, errors.	REC	**P5**

6.15 M15 · WhatsApp

Official WhatsApp Business integration for follow-ups, reminders and two-way AI conversations.

ID	Feature	Details & fields	Ref	Phase
WA-01	**Official API only**	WhatsApp Business Platform (Cloud API) or an approved BSP through an adapter. No unofficial automation that risks bans.	§14	**P6**
WA-02	**Connect number**	Company connects its WhatsApp Business number (Meta embedded signup or BSP onboarding).	§14	**P6**
WA-03	**Template management**	Create and sync message templates; approval status; variables; language; category.	§14	**P6**
WA-04	**Automated approved messages**	Lead follow-up · appointment confirmation · reminder · property / product information (photos, brochure PDF, location).	§14	**P6**
WA-05	**AI replies**	AI Employee answers customer replies with the same engine and knowledge.	§14	**P6**
WA-06	**Shared inbox**	Conversation list for humans; take over (AI pauses), reply, hand back to AI, assign.	§14, §16	**P6**
WA-07	**Human handover**	Rule-based or customer-requested handover with AI summary.	§14, §16	**P6**
WA-08	**Opt-in / opt-out**	Opt-out keywords (e.g., STOP) honoured automatically; consent stored.	§14	**P6**
WA-09	**Voice notes**	Incoming voice notes transcribed and answered.	REC	**P6**
WA-10	**Delivery tracking & usage**	Sent / delivered / read / failed status; usage metered for billing.	§24	**P6**

6.16 M16 · Website Chat Widget

Embeddable "Chat with our AI Employee" widget for each business website.

ID	Feature	Details & fields	Ref	Phase
CHAT-01	**Embeddable widget**	Generated per AI Employee; added to any website with a small JavaScript snippet.	§15	**P6**
CHAT-02	**Customisation**	Launcher text ("Chat with our AI Employee"), name, avatar, colours, position, greeting, language.	§15	**P6**
CHAT-03	**Customer actions**	Ask questions · submit enquiry · request callback · book appointment · get approved information · connect with human.	§15	**P6**
CHAT-04	**Lead capture**	Creates or updates a CRM lead (source: Website Chat).	§15	**P6**
CHAT-05	**Security**	Allowed-domain list, rate limiting, bot / spam protection.	§25	**P6**
CHAT-06	**Human takeover**	Live chat takeover from the shared inbox.	§16	**P6**
CHAT-07	**Lightweight & mobile**	Small bundle, asynchronous loading, works in mobile browsers.	§26	**P6**

6.17 M17 · Human Handoff

AI knows when to hand over to a human, and the human receives full context.

ID	Feature	Details & fields	Ref	Phase
HO-01	**Handoff triggers**	Customer asks for a person · question outside approved knowledge · hot lead · plus configurable triggers (repeated misunderstanding, negative sentiment, keywords).	§16	**P5 (voice), P6 (chat)**
HO-02	**Routing**	Assigned agent → team round-robin → any available agent → fallback. Respects agent availability status and calendar.	§16	**P5**
HO-03	**Agent context**	Human sees lead details, AI conversation summary, requirement, score and transcript at the moment of transfer (screen pop + mobile notification).	§16	**P5**
HO-04	**No agent available**	Customer informed with configured message; callback task created; lead flagged.	§16	**P5**
HO-05	**Handoff log**	Reason, time to answer and outcome recorded on conversation and lead.	§17	**P5**

6.18 M18 · Call Transcript, Summary & Conversation Records

What is stored after every conversation.

ID	Feature	Details & fields	Ref	Phase
REC-01	**Per-call record**	**Call duration · Transcript · Summary · Customer requirement · Lead score · Sentiment / intent (where reliable) · Follow-up requirement · Appointment details · Transfer status**; plus direction, numbers, AI Employee, start / end time, outcome, recording, detected language, tools used, usage.	§17	**P5**
REC-02	**WhatsApp & chat records**	Same summary / requirement / score structure for WhatsApp and website chat.	§17	**P6**
REC-03	**Recording compliance controls**	Consent announcement, enable/disable, retention period with auto-delete, role-based listen / download, access audit.	§17	**P5**

6.19 M19 · Campaign Management

Planned, compliant outbound calling to lead lists.

ID	Feature	Details & fields	Ref	Phase
CAMP-01	**Create campaign**	Name (e.g., "New Town Property Leads") · description · **Lead list** (filter, saved view or CSV) · **AI Employee** · **Calling schedule** (dates, days, time windows) · **Retry rules** (maximum attempts, gap, outcomes to retry) · **Property collection** (or catalogue collection) · **Follow-up rules** (e.g., WhatsApp after call, next call for WARM) · maximum concurrent calls · daily limit.	§18	**P6**
CAMP-02	**Campaign controls**	Start · Pause · Resume · Stop. Statuses: Draft, Scheduled, Running, Paused, Completed, Stopped.	§18	**P6**
CAMP-03	**Compliance enforcement**	Before every dial the system enforces calling limits, calling hours, opt-out / DND list, consent flags and plan usage.	§4, §18	**P6**
CAMP-04	**Live progress**	Total, pending, dialled, connected, qualified, hot, appointments, failed, skipped.	§18	**P6**
CAMP-05	**Report & export**	Per-lead outcome export and campaign summary.	REC	**P6**
CAMP-06	**Test mode**	Run a campaign against internal test numbers only.	REC	**P6**

6.20 M20 · Dashboard & Analytics

Company dashboard with KPIs and charts.

ID	Feature	Details & fields	Ref	Phase
DASH-01	**KPI cards**	**Total AI Employees · Calls Today · Connected Calls · Qualified Leads · Hot Leads · Appointments · Conversions · Human Transfers · AI Usage**.	§19	**P7**
DASH-02	**Charts**	**Leads · Calls · Connected Calls · Qualified Leads · Appointments · Conversion · Usage**, with date range (today, 7 days, 30 days, custom) and AI Employee filter.	§19	**P7**
DASH-03	**Per-employee analytics**	As EMP-13.	§20	**P7**
DASH-04	**Campaign analytics**	Funnel per campaign.	§18	**P7**
DASH-05	**Live counters**	Dashboard updates in real time.	REC	**P7**
DASH-06	**Advanced analytics**	Human-agent performance, conversion funnel, AI quality metrics, scheduled email reports, PDF / CSV export.	REC	**P12**

6.21 M21 · SaaS Subscription & Plans

Plans, pricing and limits, all controlled from Super Admin.

ID	Feature	Details & fields	Ref	Phase
SUB-01	**Plans managed in Super Admin**	Name, monthly price (INR), yearly price (optional), GST rate, trial days, public / private, included limits (AI employees, users, voice minutes, calls, WhatsApp conversations, AI credits, knowledge storage, concurrent calls, campaigns, feature access), overage prices. Nothing hard-coded.	§23	**P1**
SUB-02	**Seed plans**	STARTER ₹2,999 / month · BUSINESS ₹9,999 / month · PRO ₹24,999 / month · ENTERPRISE custom. Seed data only; editable any time.	§23	**P1**
SUB-03	**Razorpay subscriptions**	Checkout, auto-renewal, upgrade / downgrade with proration, cancellation, failed-payment retries and grace period.	DEC	**P7**
SUB-04	**Enterprise plans**	Custom limits and price assigned to a company by Super Admin; manual invoice option.	§23	**P7**

ID	Feature	Details & fields	Ref	Phase
SUB-05	**Feature gating**	Plan limits and features enforced in API and UI.	§23	**P7**
SUB-06	**GST invoices**	Auto-generated GST-compliant invoices (company GSTIN, place of supply, CGST / SGST / IGST), downloadable PDF.	§24	**P7**

6.22 M22 · Usage Tracking & Billing

Voice, AI and WhatsApp usage measured separately, ready for usage-based billing.

ID	Feature	Details & fields	Ref	Phase
USE-01	**Usage metering**	Voice minutes (inbound / outbound), calls, AI usage (credits from tokens), WhatsApp conversations / messages, STT / TTS consumption, storage. Recorded per company, employee and conversation.	§23, §24	**P4-P6 capture, P7 display**
USE-02	**Billing page**	**Voice minutes · Calls · AI usage · WhatsApp usage · Credits · Remaining usage · Billing history · Subscription · Invoices**.	§24	**P7**
USE-03	**Limits & alerts**	Alerts at configurable thresholds (e.g., 80 %, 100 %); hard stop or overage behaviour per plan.	§24	**P7**
USE-04	**Credits**	Credit balance; credits granted by plan; Super Admin adjustments.	§24	**P7**
USE-05	**Usage-based billing**	Pay-as-you-go / credit top-ups via Razorpay; overage invoicing.	§24	**P12**
USE-06	**Provider cost tracking**	Actual provider cost per call / message stored for Super Admin margin reports.	§24	**P7**

6.23 M23 · Super Admin Panel

Custom panel on our own template. Django's built-in admin is not used.

ID	Feature	Details & fields	Ref	Phase
SA-01	**Built on our template**	Fully custom Super Admin panel built on the Rizz admin template (folder AdminTemplate), light theme. Django's built-in admin (django.contrib.admin) is not installed.	DEC	**P1 → all**
SA-02	**Platform dashboard**	Companies, active AI Employees, calls, minutes, MRR / revenue, usage, errors, provider health.	§22	**P7**
SA-03	**Companies**	List / search, detail, create, edit, suspend / activate, change plan, usage, data export / deletion, support login (impersonation with audit trail and visible banner).	§22	**P1**
SA-04	**Users**	All users, roles, reset password, lock / unlock, reset 2FA, deactivate.	§22	**P1**
SA-05	**Industries & industry templates**	Everything in M04, including activate / deactivate.	§22	**P3**
SA-06	**Roles & tools**	Everything in M05 and M09.	§22	**P3, P4**
SA-07	**CRM configuration**	Statuses, sources, fields, scoring rules, import limits.	DEC	**P3**
SA-08	**AI Employees (all companies)**	View, status, pause for abuse, configuration history.	§22	**P4**
SA-09	**AI providers**	LLM providers, model per task, fallback order, encrypted keys, cost per unit, enable / disable. Includes a generic **OpenAI-compatible** provider type (base URL + key), so any compatible gateway can be added without code.	§22, §27	**P4**

ID	Feature	Details & fields	Ref	Phase
SA-28	**Free LLM gateway for testing**	During development and testing the AI runs on free LLM tiers through a self-hosted **FreeLLMAPI** gateway (added as an OpenAI-compatible provider), so testing costs neither us nor the client. Rules: provider marked **Test only** and blocked in production; dummy data only, never real customer data; one account per upstream provider; phase-gate AI evaluation and voice latency tests run on the real production model.	DEC	**P1 → all**
SA-10	**Voice & channel providers**	STT, TTS, telephony, WhatsApp, email, SMS and payment providers: encrypted credentials, routing per language, number pool, health status.	§22	**P5-P7**
SA-11	**Languages & voices**	Add / enable languages; STT / TTS mapping; voice catalogue; default greetings and disclosure texts.	§22	**P5**
SA-12	**Plans & pricing**	Everything in M21.	§22, §23	**P1**
SA-13	**Billing**	Subscriptions, payments, invoices, failed payments, GST settings, credit adjustments.	§22	**P7**
SA-14	**Usage**	Usage per company and per provider; cost vs revenue.	§22	**P7**
SA-15	**Calls**	Global call log across companies with filters and quality metrics.	§22	**P5**
SA-16	**System settings**	Platform name and branding, registration on/off, trial settings, password and session policy, 2FA enforcement, upload limits, retention defaults, recording defaults, calling defaults (hours, attempts, DND check), email and notification templates, website content, legal pages.	§22	**P1 (+ each phase)**
SA-17	**Logs**	Audit log, system / error log, API log, webhook log, call-event log: searchable and filterable.	§22, §25	**P1**
SA-18	**Security**	Staff accounts and roles (Super Admin, Support), mandatory 2FA, IP allowlist, sessions, security events.	§22, §25	**P1**
SA-19	**Support**	Tickets from companies, replies, status; platform enquiries from the website.	§22	**P7**
SA-20	**Feature flags**	Enable features per plan or per company.	REC	**P7**
SA-21	**General Settings menu**	Dedicated **General Settings** menu in Super Admin holding all platform-wide settings of our SaaS. Nothing below is hard-coded anywhere; changes apply everywhere without deployment.	DEC	**P1**
SA-22	**Branding**	**Platform name** · short name · tagline · **logo** (light and dark versions) · **favicon** · app / PWA icon · login-page image · brand colours · "Powered by" text on the chat widget.	DEC	**P1**
SA-23	**Branding shown everywhere**	Values read live by: public website (header, footer, page titles, favicon), company panel, Super Admin, login / registration pages, emails, GST invoices, chat widget, PWA and the future Flutter app (through the API).	DEC	**P1 → all**
SA-24	**Contact & company details**	Support email, support phone / WhatsApp, office address, legal company name, GSTIN / PAN for invoices, social media links, copyright / footer text.	DEC	**P1**
SA-25	**Localisation defaults**	Default timezone (Asia/Kolkata), currency (INR), date / number format (lakh / crore), default language.	DEC	**P1**
SA-26	**SEO & email defaults**	Default meta title, description, OpenGraph image, analytics tracking IDs; email sender name and address, email header / footer.	DEC	**P1**
SA-27	**Maintenance mode**	Switch the website and panels to a maintenance page with a custom message (Super Admin still accessible).	DEC	**P1**

6.24 M24 · Company Panel (General)

Professional panel for each registered business, built on our template.

ID	Feature	Details & fields	Ref	Phase
CP-01	**Built on our template**	Professional company admin panel built on the same Rizz template as Super Admin (own sidebar and accent colour), light theme.	DEC	**P2**
CP-02	**Navigation**	Dashboard · AI Employees · Leads · Calendar · Conversations (Calls, WhatsApp, Chat inbox) · Campaigns · Knowledge Base · Catalogue (Properties / Packages / Courses …) · Analytics · Billing & Usage · Team · Settings · Support. Menus shown per role and plan.	§19-§21	**P2 (shell)**
CP-03	**Notifications**	In-app notification centre plus email / WhatsApp / push to humans: hot lead, transfer request, new appointment, campaign finished, usage alerts.	§16	**P6**
CP-04	**Global search**	Find leads by name, phone or email from anywhere in the panel.	REC	**P3**
CP-05	**Support**	Raise tickets to platform support.	§22	**P7**
CP-06	**Settings**	Company profile, business hours, holidays, channels (numbers, WhatsApp, widget), compliance (recording, consent texts, calling hours within platform limits), data export / delete request.	§25	**P2 → P7**
CP-07	**Mobile-first agent experience**	Human agents work fully from a phone: leads, follow-ups, transfers, calendar, inbox. Installable web app with push notifications.	§26	**P6**

6.25 M25 · Security

Security controls required by the client, with implementation detail.

ID	Feature	Details & fields	Ref	Phase
SEC-01	**HTTPS**	TLS 1.2+ everywhere, HSTS, secure cookies.	§25	**P1**
SEC-02	**Secure authentication**	Argon2 password hashing, 2FA, lockout, session controls (M02).	§25	**P1**
SEC-03	**Role-based access**	Panel, API and object-level permission checks.	§25	**P1**
SEC-04	**API key protection**	Provider keys encrypted in a secrets manager; never sent to browsers; rotation supported.	§25	**P1**
SEC-05	**Database access control**	Private network, least-privilege database users, row-level security.	§25	**P1**
SEC-06	**Company-level data isolation**	See M03.	§25	**P1**
SEC-07	**Encryption**	Encryption at rest (database, files, backups) and field-level encryption of credentials and tokens.	§25	**P1**
SEC-08	**Audit logs**	Who did what, when, from where. Append-only.	§25	**P1**
SEC-09	**Rate limiting**	Per IP, user, company, widget and webhook.	§25	**P1**
SEC-10	**Backups**	Automated daily backups plus point-in-time recovery; restore drill at P8 and quarterly after launch.	§25	**P1, P8**
SEC-11	**Secure file storage**	Private buckets, signed URLs, file type / size validation, malware scan.	§25	**P4**
SEC-12	**Data deletion controls**	Retention policies, recording auto-delete, account deletion (TEN-07).	§25	**P7**

ID	Feature	Details & fields	Ref	Phase
SEC-13	**Webhook verification**	Signature verification for telephony, WhatsApp and Razorpay callbacks.	§25	**P5-P7**
SEC-14	**AI security**	Prompt-injection defences, tool permission scoping, output validation.	§25	**P4**
SEC-15	**Security testing**	SAST, dependency, secret and container scans on every pull request; DAST on staging; external penetration test before launch.	§25	**All, P8**

6.26 M26 · Compliance & Trust Controls

Configurable controls written into the client's requirements.

ID	Feature	Details & fields	Ref	Phase
COMP-01	**AI disclosure**	AI identifies itself as an AI assistant in every conversation.	§4	**P4**
COMP-02	**Consent records**	Consent / opt-out stored per lead and channel with source and timestamp.	§4	**P5**
COMP-03	**DND / opt-out check**	Opt-out list and DND check before every outbound call (provider / registry integration point).	§4, §18	**P6**
COMP-04	**Calling hours & attempt caps**	Platform-level limits from Super Admin; company can tighten but not exceed them.	§18	**P6**
COMP-05	**No unauthorised robocalling**	Outbound only to leads with a valid source or consent; campaign start requires company-admin approval.	§4	**P6**
COMP-06	**Recording consent & retention**	See REC-03.	§17	**P5**
COMP-07	**Official WhatsApp API only**	See WA-01 and WA-08.	§14	**P6**
COMP-08	**Collection role restrictions**	Enabled per company by Super Admin; tone and timing guardrails.	§3	**P10**
COMP-09	**Data privacy**	Export, deletion, retention, India-region hosting.	§4, §25	**P7**

6.27 M27 · Notifications & Communication

System messages to platform users.

ID	Feature	Details & fields	Ref	Phase
NOTI-01	**Transactional emails**	Welcome, verification, password reset, invitation, invoice, payment failed, usage alerts. Templates managed in Super Admin.	§22	**P1, P7**
NOTI-02	**In-app notifications**	Notification centre with read / unread state.	REC	**P6**
NOTI-03	**Agent alerts**	WhatsApp / push alerts to human agents for transfers, hot leads and bookings.	§16	**P6**

6.28 M28 · Mobile Responsiveness

Works properly on every device sales teams use.

ID	Feature	Details & fields	Ref	Phase
MOB-01	**All surfaces responsive**	Website, company panel, Super Admin and widget on desktop, laptop, tablet, Android and iPhone. Device testing is part of every phase gate.	§26	**All**
MOB-02	**Mobile layouts**	Tables become cards; touch-friendly controls; bottom navigation for agents.	§26	**All**

ID	Feature	Details & fields	Ref	Phase
MOB-03	**Installable app**	Progressive Web App with push notifications for human agents.	REC	**P6**

6.29 M29 · Platform Engineering

Non-functional foundations that make the product reliable and testable.

ID	Feature	Details & fields	Ref	Phase
ENGR-01	**Source control**	GitHub repository, branch protection, mandatory pull-request reviews.	§29	**P0**
ENGR-02	**CI pipeline**	GitHub Actions: lint, type checks, tests, builds, security scans on every pull request.	§29	**P0**
ENGR-03	**Environments**	Local, staging and production; staging mirrors production.	§29	**P0, P8**
ENGR-04	**Infrastructure as code**	All cloud resources defined in Terraform and changed through pull requests.	§27	**P0**
ENGR-05	**Monitoring & alerting**	Logs, metrics, traces, error tracking and alerts.	REC	**P1 → P8**
ENGR-06	**API documentation**	OpenAPI specification generated from code.	REC	**P1**
ENGR-07	**Load & performance testing**	API load tests and concurrent-call simulations.	§32	**P5, P8**
ENGR-08	**Disaster recovery**	Documented DR plan and restore drill.	§25	**P8**

6.30 M30 · API-First & Mobile App Readiness

Every section is built in Django together with its REST APIs, so the future Flutter mobile app (Android + iOS) connects to the same system: same data, same workflows. Only the mobile UI and app-side code will need to be written.

ID	Feature	Details & fields	Ref	Phase
API-01	**REST API for every feature**	Every feature in this catalogue is delivered with its Django REST API in the **same phase**. The web panels use these same APIs, so no capability is web-only.	DEC	**P1 → all**
API-02	**Mobile-ready authentication**	The same login endpoints issue Bearer access and refresh tokens for mobile apps (stored in iOS Keychain / Android Keystore); web panels use secure cookies. Same 2FA, roles and company isolation.	DEC	**P1**
API-03	**API documentation**	OpenAPI specification generated from the Django code and published every phase; used to auto-generate the Flutter (Dart) API client.	DEC	**P1 → all**
API-04	**Stable versioning**	All endpoints under /api/v1. Breaking changes only in a new version, so already-released mobile apps keep working.	DEC	**P1**
API-05	**Push notification devices**	Register / remove mobile device tokens (Firebase Cloud Messaging for Android and iOS) so the app receives hot-lead, transfer and appointment alerts.	DEC	**P6**
API-06	**Mobile-friendly responses**	Cursor pagination, filters, compact payloads, file upload / download through signed URLs, real-time events over the same WebSocket.	DEC	**P1 → all**
API-07	**API tests every phase**	Every endpoint covered by automated API tests (including cross-company isolation) as part of the GitHub CI gate.	DEC	**P1 → all**
API-08	**Flutter mobile app (Android + iOS)**	Future project. The app connects to the same APIs, data and workflows; only mobile design and app-side code are written. Not in the current scope.	DEC	**Future**

7. Phase Plan

Phases follow dependencies: CRM, catalogues and calendar (P3) are built before the AI engine (P4) because AI tools write into them; the AI engine is proven in text before voice (P5). The table maps the client's milestones to our phases.

Client milestone	Our phase(s)
M1 UI/UX + architecture	P0 (architecture; UI/UX design dropped, templates supplied)
M2 Authentication + company dashboard	P1 (Super Admin first) + P2 (website, registration, company panel)
M3 AI Employee engine	P4
M4 Voice calling	P5
M5 CRM + leads	P3
M6 Knowledge base + tools	P4
M7 WhatsApp + appointment	P6 (calendar core in P3)
M8 Admin + subscription	P7 (Super Admin grows every phase)
M9 Testing + security + deployment	P8 (testing and security also at every gate)
Post-MVP (client: everything is to be built)	P9, P10, P11, P12

Phase	Title	Release
P0	Discovery, Architecture & Project Setup	MVP
P1	Core Platform & Super Admin First	MVP
P2	Website, Company Registration & Company Panel	MVP
P3	Configuration Engine, CRM, Catalogues & Calendar	MVP
P4	AI Employee Engine, Knowledge Base & Tools	MVP
P5	Voice AI	MVP
P6	WhatsApp, Website Chat, Appointments, Handoff & Campaigns	MVP
P7	Dashboards, Subscription, Billing, Usage & Super Admin Completion	MVP
P8	Hardening, Security, Performance & Production Launch	MVP
P9	Industry Expansion	Post-MVP
P10	Additional AI Employee Types & Custom Roles	Post-MVP
P11	Language Expansion	Post-MVP
P12	Advanced Billing & Analytics	Post-MVP

PHASE
0

Discovery, Architecture & Project Setup

Client mapping: Milestone 1: architecture (separate UI/UX design dropped, agreed with client) · Release: **MVP**

Objective

Freeze scope and architecture, set up the project, map the supplied templates, and prove that voice quality and latency meet the target in Hindi, English and Bengali. No separate UI/UX design or prototype is produced: as agreed with the client, development starts directly on the website and admin templates supplied by our team.

Scope summary

Area	Features / content
Documents	This requirements document (PRD-01) and the System Design & Architecture document (SDD-02): technical, database, API, AI, voice and industry-template architecture; security, deployment and testing plans.
Template mapping	Review the supplied website template and admin templates; map every website section to a Super Admin content model (WEB-09) and every panel page to its feature.
Voice PoC	Provider bake-off: Hindi, English and Bengali × 2-3 STT / TTS providers. Scored on recognition accuracy (including code-mixed speech), voice naturalness and end-to-end latency. Best provider chosen per language.
AI PoC	LLM evaluation on Hinglish / Bengali extraction (budget, location, BHK) and grounded answering.
Engineering	GitHub repository, branch protection, CI skeleton, environments, Terraform skeleton (ENGR-01..04); one Django 5.2 project; eSoft and Rizz templates and static files copied in; Rizz SCSS built once with gulp.
Commercial	Timeline, fixed development cost, third-party API, running, hosting and maintenance costs in a separate commercial proposal.

Feature checklist for this phase (6 items, compiled from Section 6)

ID	Feature	Module
WEB-09	Section-by-section mapping of the template	M01 Public Website (Marketing Site)
VOICE-08	Professional quality in every language	M14 Voice AI
ENGR-01	Source control	M29 Platform Engineering
ENGR-02	CI pipeline	M29 Platform Engineering
ENGR-03	Environments	M29 Platform Engineering
ENGR-04	Infrastructure as code	M29 Platform Engineering

Super Admin controls delivered in this phase

- Settings registry designed: complete list of every configurable value and which Super Admin screen owns it.
- Template sections mapped to Super Admin content models (website) and screens (panels).

Phase-specific tests and gate criteria

- Voice PoC meets latency target (P50 ≤ 1.2 s) for each MVP language, or a mitigation is agreed.
- Template mapping sheet reviewed: no website section left without a Super Admin editor.
- Repository CI pipeline runs green on the empty skeleton.

Deliverables

- Signed-off PRD-01 and SDD-02
- Template mapping sheet
- Voice & AI PoC report with per-language provider choice
- Commercial proposal
- Repository with green CI

Phase rules (apply to this phase)

- **No hard-coding:** every value introduced in this phase is configurable from Super Admin.
- **Super Admin screens** for this phase are built on our admin template; Django's built-in admin is not used.
- **REST APIs:** every feature of this phase ships with its Django REST API, OpenAPI documentation and API tests, ready for the future Flutter mobile app.
- **Gate exit** only after: tests pass → GitHub CI green → security check passed → no-hard-coding review → staging UAT → client sign-off (Section 4).

PHASE 1

Core Platform & Super Admin First

Client mapping: Milestone 2 (part 1): authentication + Super Admin · Release: **MVP**

Objective

Build the backend core (authentication, roles, multi-tenancy, security baseline) and the Super Admin panel on our admin template first, because every other part of the product is configured from it. Super Admin gets General Settings, the full website content manager (every section of the website template), plans and pricing data, companies, users, settings and logs. All with REST APIs.

Scope summary

Area	Features / content
Auth & security	AUTH-03 to AUTH-06, AUTH-08, AUTH-11, SEC-01 to SEC-10
Multi-tenancy	TEN-01, TEN-02, TEN-03, TEN-05, TEN-06
Super Admin	SA-01, SA-03, SA-04, SA-16 (base), SA-17, SA-18; General Settings SA-21 to SA-27
Website content	WEB-04, WEB-09: an editor for every section of the website template, legal pages, SEO
Plans & pricing data	SUB-01, SUB-02, SA-12 (plans and limits; payments come in P7)
Other	NOTI-01 (account emails), ENGR-05, ENGR-06, API-01 to API-04, API-06, API-07

Feature checklist for this phase (49 items, compiled from Section 6)

ID	Feature	Module
WEB-04	Website content management (Super Admin)	M01 Public Website (Marketing Site)
WEB-09	Section-by-section mapping of the template	M01 Public Website (Marketing Site)

API-03	API documentation	M30 API-First & Mobile App Readiness
API-04	Stable versioning	M30 API-First & Mobile App Readiness
API-06	Mobile-friendly responses	M30 API-First & Mobile App Readiness
API-07	API tests every phase	M30 API-First & Mobile App Readiness

Super Admin controls delivered in this phase

- General Settings: platform name, logo, favicon, colours, contact details, footer, localisation, email sender, maintenance mode (shown everywhere)
- Website content: every section, heading, text, image, button, order, show / hide; legal pages; SEO
- Plans, prices and limits
- Registration on/off, trial settings, password, session, lockout and 2FA policy
- Roles and permissions
- Email templates

- Companies, users, audit logs, security events

Phase-specific tests and gate criteria

- Super Admin login with mandatory 2FA, lockout and audit trail
- Every website section editable and versioned via API; content API returns what the editor saved
- RBAC matrix tests for staff roles
- Cross-tenant isolation suite (TEN-05) green

Deliverables

- Working Super Admin panel on our admin template
- General Settings and full website content manager
- Plans and pricing data
- Documented REST APIs

Phase rules (apply to this phase)

- **No hard-coding:** every value introduced in this phase is configurable from Super Admin.
- **Super Admin screens** for this phase are built on our admin template; Django's built-in admin is not used.
- **REST APIs:** every feature of this phase ships with its Django REST API, OpenAPI documentation and API tests, ready for the future Flutter mobile app.
- **Gate exit** only after: tests pass → GitHub CI green → security check passed → no-hard-coding review → staging UAT → client sign-off (Section 4).

PHASE
2

Website, Company Registration & Company Panel

Client mapping: Milestone 2 (part 2): company registration + company dashboard · Release: **MVP**

Objective

Build the public animated website on the supplied template, reading every section from Super Admin, the company registration flow, and the company panel shell on our template, so a business can register, verify, log in and invite its team.

Scope summary

Area	Features / content
Website	WEB-01 to WEB-03, WEB-05 to WEB-08: all content from Super Admin (WEB-04)
Registration & team	AUTH-01, AUTH-02, AUTH-07, AUTH-09, AUTH-10
Company panel	CP-01, CP-02 (shell), CP-06 (profile)

Feature checklist for this phase (16 items, compiled from Section 6)

ID	Feature	Module
WEB-01	Animated landing page	M01 Public Website (Marketing Site)
WEB-02	Website pages	M01 Public Website (Marketing Site)
WEB-03	Legal pages	M01 Public Website (Marketing Site)
WEB-05	Company registration entry	M01 Public Website (Marketing Site)
WEB-06	Contact / demo enquiries	M01 Public Website (Marketing Site)
WEB-07	SEO & performance	M01 Public Website (Marketing Site)
WEB-08	Responsive & accessible	M01 Public Website (Marketing Site)
AUTH-01	Company registration	M02 Registration, Authentication & Accounts
AUTH-02	Verification	M02 Registration, Authentication & Accounts
AUTH-07	Team management	M02 Registration, Authentication & Accounts
AUTH-09	Company profile	M02 Registration, Authentication & Accounts
AUTH-10	Onboarding checklist	M02 Registration, Authentication & Accounts
CP-01	Built on our template	M24 Company Panel (General)
CP-02	Navigation	M24 Company Panel (General)
CP-06	Settings	M24 Company Panel (General)
ENGR-05	Monitoring & alerting	M29 Platform Engineering

Super Admin controls delivered in this phase

- Platform enquiries inbox
- Registered companies appear in Super Admin with onboarding status

Phase-specific tests and gate criteria

- E2E: visitor → register company → verify → login → 2FA → invite team member
- Change any website section in Super Admin → visible on the website without deployment

- No hard-coded text left in the website template (review checklist)
- Website Lighthouse ≥ 90 on mobile and desktop; device testing on all five device classes

Deliverables

- Live staging website driven by Super Admin
- Working registration and login
- Company panel shell on our template

Phase rules (apply to this phase)

- **No hard-coding:** every value introduced in this phase is configurable from Super Admin.
- **Super Admin screens** for this phase are built on our admin template; Django's built-in admin is not used.
- **REST APIs:** every feature of this phase ships with its Django REST API, OpenAPI documentation and API tests, ready for the future Flutter mobile app.
- **Gate exit** only after: tests pass → GitHub CI green → security check passed → no-hard-coding review → staging UAT → client sign-off (Section 4).

PHASE
3

Configuration Engine, CRM, Catalogues & Calendar

Client mapping: Milestone 5: CRM + leads (scheduled earlier because AI tools write into CRM and calendar) · Release: **MVP**

Objective

Build the industry template engine, the built-in CRM with dynamic fields, business catalogues (property database, travel packages, courses) and the built-in calendar. Everything the AI Employee will act on exists and is configurable before the AI is connected.

Scope summary

Area	Features / content
Industry templates	IND-01 to IND-05; IND-06 configuration for Real Estate, Travel, Education
Roles	ROLE-01
CRM	CRM-01 to CRM-07, CRM-09 to CRM-18
Scoring rules	SCORE-02
Catalogues	CAT-01, CAT-02, CAT-04 to CAT-08
Calendar	CAL-01 to CAL-05, CAL-08, CAL-09
Panels	CP-04, SA-05, SA-07

Feature checklist for this phase (45 items, compiled from Section 6)

ID	Feature	Module
IND-01	Industry management	M04 Industry Template Engine
IND-02	Template contents	M04 Industry Template Engine
IND-03	Template versioning	M04 Industry Template Engine
IND-04	Activate / deactivate	M04 Industry Template Engine
IND-05	Clone template	M04 Industry Template Engine
IND-06	MVP templates	M04 Industry Template Engine
ROLE-01	Role template management	M05 AI Employee Roles
CRM-01	Lead record: common fields	M10 CRM & Lead Management (built-in, controlled from Super Admin)
CRM-02	Lead statuses	M10 CRM & Lead Management (built-in, controlled from Super Admin)
CRM-03	Lead sources	M10 CRM & Lead Management (built-in, controlled from Super Admin)
CRM-04	Dynamic custom fields	M10 CRM & Lead Management (built-in, controlled from Super Admin)
CRM-05	Real Estate fields	M10 CRM & Lead Management (built-in, controlled from Super Admin)
CRM-06	Travel fields	M10 CRM & Lead Management (built-in, controlled from Super Admin)
CRM-07	Education fields	M10 CRM & Lead Management (built-in, controlled from Super Admin)
CRM-09	Lead list	M10 CRM & Lead Management (built-in, controlled from Super Admin)

ID	Feature	Module
CRM-10	Pipeline board	M10 CRM & Lead Management (built-in, controlled from Super Admin)
CRM-11	Lead detail	M10 CRM & Lead Management (built-in, controlled from Super Admin)
CRM-12	Manual create / edit	M10 CRM & Lead Management (built-in, controlled from Super Admin)
CRM-13	Import / export	M10 CRM & Lead Management (built-in, controlled from Super Admin)
CRM-14	Duplicate management	M10 CRM & Lead Management (built-in, controlled from Super Admin)
CRM-15	Assignment	M10 CRM & Lead Management (built-in, controlled from Super Admin)
CRM-16	Follow-up tasks	M10 CRM & Lead Management (built-in, controlled from Super Admin)
CRM-17	Bulk actions	M10 CRM & Lead Management (built-in, controlled from Super Admin)
CRM-18	Super Admin control	M10 CRM & Lead Management (built-in, controlled from Super Admin)
SCORE-02	Configurable rules	M11 Lead Scoring
CAT-01	Catalogue engine	M12 Business Catalogues
CAT-02	Real Estate property database	M12 Business Catalogues
CAT-04	Property collections	M12 Business Catalogues
CAT-05	Travel package catalogue	M12 Business Catalogues
CAT-06	Education course catalogue	M12 Business Catalogues
CAT-07	Import & media	M12 Business Catalogues
CAT-08	Indian price formatting	M12 Business Catalogues
CAL-01	Built-in calendar	M13 Calendar & Appointments (built-in)
CAL-02	Calendar resources	M13 Calendar & Appointments (built-in)
CAL-03	Availability rules	M13 Calendar & Appointments (built-in)
CAL-04	Appointment types	M13 Calendar & Appointments (built-in)
CAL-05	Appointment record	M13 Calendar & Appointments (built-in)
CAL-08	Manual booking	M13 Calendar & Appointments (built-in)
CAL-09	Holiday calendar	M13 Calendar & Appointments (built-in)
SA-05	Industries & industry templates	M23 Super Admin Panel
SA-06	Roles & tools	M23 Super Admin Panel
SA-07	CRM configuration	M23 Super Admin Panel
CP-04	Global search	M24 Company Panel (General)
CP-06	Settings	M24 Company Panel (General)
ENGR-05	Monitoring & alerting	M29 Platform Engineering

Super Admin controls delivered in this phase

- Industries, templates, versions, activate / deactivate, clone
- Lead fields, statuses, sources, scoring rules

- Catalogue types and fields
- Appointment types, platform holidays
- Role templates

Phase-specific tests and gate criteria

- Add a new CRM field and a new catalogue field from Super Admin with no deployment (demonstrated live)
- Import 10,000 leads with duplicates and errors; verify report
- Double-booking prevention under concurrent requests
- Template versioning: publish, upgrade a company, roll back

Deliverables

- Working CRM with Real Estate / Travel / Education fields
- Property, package and course catalogues
- Built-in calendar
- Template engine in Super Admin

Phase rules (apply to this phase)

- **No hard-coding:** every value introduced in this phase is configurable from Super Admin.
- **Super Admin screens** for this phase are built on our admin template; Django's built-in admin is not used.
- **REST APIs:** every feature of this phase ships with its Django REST API, OpenAPI documentation and API tests, ready for the future Flutter mobile app.
- **Gate exit** only after: tests pass → GitHub CI green → security check passed → no-hard-coding review → staging UAT → client sign-off (Section 4).

PHASE
4

AI Employee Engine, Knowledge Base & Tools

Client mapping: Milestone 3: AI Employee engine + Milestone 6: Knowledge base + tools · Release: **MVP**

Objective

Deliver the AI Employee creation wizard, the shared AI engine, the knowledge base with approval workflow and the tools framework. AI Employees work end-to-end in text (test console) for all three MVP industries.

Scope summary

Area	Features / content
Roles	ROLE-02 to ROLE-05
AI Employee management	EMP-01 to EMP-12 (text testing)
Engine	ENG-01 to ENG-12
Knowledge base	KB-01 to KB-11
Tools	TOOL-01 to TOOL-07, TOOL-13 to TOOL-15
Scoring	SCORE-01, SCORE-03, SCORE-04, SCORE-06
Other	CAT-03, CAL-06, TEN-04, USE-01 (AI usage), SA-06, SA-08, SA-09, SEC-11, SEC-14, COMP-01

Feature checklist for this phase (66 items, compiled from Section 6)

ID	Feature	Module
TEN-04	Isolated AI knowledge	M03 Multi-Tenancy & Data Isolation
IND-06	MVP templates	M04 Industry Template Engine
ROLE-02	AI Sales Employee	M05 AI Employee Roles
ROLE-03	AI Receptionist	M05 AI Employee Roles
ROLE-04	AI Appointment Employee	M05 AI Employee Roles
ROLE-05	AI Follow-up Employee	M05 AI Employee Roles
EMP-01	My AI Employees page	M06 AI Employee Management (Company Panel)
EMP-02	Wizard step 1: Select Industry	M06 AI Employee Management (Company Panel)
EMP-03	Wizard step 2: Select Employee Type	M06 AI Employee Management (Company Panel)
EMP-04	Wizard step 3: Employee Name	M06 AI Employee Management (Company Panel)
EMP-05	Wizard step 4: Voice	M06 AI Employee Management (Company Panel)
EMP-06	Wizard step 5: Languages	M06 AI Employee Management (Company Panel)
EMP-07	Wizard step 6: Business Knowledge	M06 AI Employee Management (Company Panel)
EMP-08	Wizard step 7: Connect Tools	M06 AI Employee Management (Company Panel)
EMP-09	Wizard step 8: Configure Rules	M06 AI Employee Management (Company Panel)

ID	Feature	Module
EMP-10	Wizard step 9: Test AI	M06 AI Employee Management (Company Panel)
EMP-11	Wizard step 10: Activate	M06 AI Employee Management (Company Panel)
EMP-12	Edit, settings, pause	M06 AI Employee Management (Company Panel)
ENG-01	One engine, all channels	M07 AI Employee Engine (Core Runtime)
ENG-02	Layered configuration	M07 AI Employee Engine (Core Runtime)
ENG-03	Tool calling	M07 AI Employee Engine (Core Runtime)
ENG-04	No invented facts	M07 AI Employee Engine (Core Runtime)
ENG-05	AI disclosure	M07 AI Employee Engine (Core Runtime)

TOOL-03	search_customer()	M09 Tools / Actions Framework
TOOL-04	search_product()	M09 Tools / Actions Framework
TOOL-05	check_availability() / book_appointment() / reschedule_appointment() / cancel_appointment()	M09 Tools / Actions Framework
TOOL-06	assign_salesperson()	M09 Tools / Actions Framework
TOOL-07	send_email()	M09 Tools / Actions Framework
TOOL-13	Per-employee tool control	M09 Tools / Actions Framework
TOOL-14	Tool execution log	M09 Tools / Actions Framework
TOOL-15	MVP industry tools	M09 Tools / Actions Framework

ID	Feature	Module
SCORE-01	Automatic classification	M11 Lead Scoring
SCORE-03	AI intent signal	M11 Lead Scoring
SCORE-04	Score explanation	M11 Lead Scoring
SCORE-06	Score history	M11 Lead Scoring
CAT-03	Property matching	M12 Business Catalogues
CAL-06	AI booking tools	M13 Calendar & Appointments (built-in)
USE-01	Usage metering	M22 Usage Tracking & Billing
SA-06	Roles & tools	M23 Super Admin Panel
SA-08	AI Employees (all companies)	M23 Super Admin Panel
SA-09	AI providers	M23 Super Admin Panel
CP-06	Settings	M24 Company Panel (General)
SEC-11	Secure file storage	M25 Security
SEC-14	AI security	M25 Security
COMP-01	AI disclosure	M26 Compliance & Trust Controls
ENGR-05	Monitoring & alerting	M29 Platform Engineering

Super Admin controls delivered in this phase

- Tool registry
- LLM providers, model per task and fallback order
- Base instructions, guardrails and greetings per template and language
- Knowledge limits per plan

Phase-specific tests and gate criteria

- AI evaluation suite for Real Estate, Travel, Education × Hindi, English, Bengali (text)
- Grounding test: zero invented prices, discounts or availability across the test set
- Extraction accuracy ≥ agreed threshold (e.g., budget, location, BHK)
- Correct tool selection and arguments
- Prompt-injection and cross-tenant knowledge tests

Deliverables

- AI Employee wizard (10 steps, text test)
- Knowledge base with approval
- Tools framework + MVP tools
- Automatic lead scoring

Phase rules (apply to this phase)

- **No hard-coding:** every value introduced in this phase is configurable from Super Admin.
- **Super Admin screens** for this phase are built on our admin template; Django's built-in admin is not used.
- **REST APIs:** every feature of this phase ships with its Django REST API, OpenAPI documentation and API tests, ready for the future Flutter mobile app.
- **Gate exit** only after: tests pass → GitHub CI green → security check passed → no-hard-coding review → staging UAT → client sign-off (Section 4).

PHASE 5

Voice AI

Client mapping: Milestone 4: Voice calling · Release: **MVP**

Objective

Connect the AI engine to the telephone: inbound and authorised outbound calls in Hindi, English and Bengali with low latency, barge-in, transfers, recordings, transcripts and post-call analysis.

Scope summary

Area	Features / content
Voice	VOICE-01 to VOICE-22
Tools	TOOL-08
Handoff	HO-01 to HO-05 (voice)
Records	REC-01, REC-03
Wizard	EMP-05 live voices, EMP-08 phone, EMP-10 voice test
Super Admin	SA-10 (telephony, STT, TTS), SA-11, SA-15
Compliance	COMP-02, COMP-06
Usage	USE-01 voice minutes and calls

Feature checklist for this phase (45 items, compiled from Section 6)

ID	Feature	Module
EMP-05	Wizard step 4: Voice	M06 AI Employee Management (Company Panel)
EMP-08	Wizard step 7: Connect Tools	M06 AI Employee Management (Company Panel)
EMP-10	Wizard step 9: Test AI	M06 AI Employee Management (Company Panel)
ENG-07	Mixed-language understanding	M07 AI Employee Engine (Core Runtime)
TOOL-08	transfer_call()	M09 Tools / Actions Framework
CRM-11	Lead detail	M10 CRM & Lead Management (built-in, controlled from Super Admin)
VOICE-01	Inbound calls	M14 Voice AI
VOICE-02	Authorized outbound calls	M14 Voice AI
VOICE-03	Real-time pipeline	M14 Voice AI
VOICE-04	Low latency	M14 Voice AI
VOICE-05	Natural conversation	M14 Voice AI
VOICE-06	Interruption / barge-in	M14 Voice AI
VOICE-07	MVP languages	M14 Voice AI
VOICE-08	Professional quality in every language	M14 Voice AI
VOICE-09	Voice catalogue	M14 Voice AI
VOICE-10	AI identification	M14 Voice AI
VOICE-11	Call transfer	M14 Voice AI
VOICE-12	Call recording	M14 Voice AI

ID	Feature	Module
VOICE-13	Transcript	M14 Voice AI
VOICE-14	Post-call analysis	M14 Voice AI
VOICE-15	Call logs	M14 Voice AI
VOICE-16	Phone-number management	M14 Voice AI
VOICE-17	Voicemail & no-answer handling	M14 Voice AI
VOICE-18	Call limits	M14 Voice AI
VOICE-19	Browser test call	M14 Voice AI
VOICE-20	Add languages without code	M14 Voice AI
VOICE-21	Provider failover	M14 Voice AI
VOICE-22	Voice quality metrics	M14 Voice AI
HO-01	Handoff triggers	M17 Human Handoff
HO-02	Routing	M17 Human Handoff
HO-03	Agent context	M17 Human Handoff
HO-04	No agent available	M17 Human Handoff
HO-05	Handoff log	M17 Human Handoff
REC-01	Per-call record	M18 Call Transcript, Summary & Conversation Records
REC-03	Recording compliance controls	M18 Call Transcript, Summary & Conversation Records
USE-01	Usage metering	M22 Usage Tracking & Billing
SA-10	Voice & channel providers	M23 Super Admin Panel
SA-11	Languages & voices	M23 Super Admin Panel
SA-15	Calls	M23 Super Admin Panel
CP-06	Settings	M24 Company Panel (General)
SEC-13	Webhook verification	M25 Security
COMP-02	Consent records	M26 Compliance & Trust Controls
COMP-06	Recording consent & retention	M26 Compliance & Trust Controls
ENGR-05	Monitoring & alerting	M29 Platform Engineering
ENGR-07	Load & performance testing	M29 Platform Engineering

Super Admin controls delivered in this phase

- Telephony providers and number pool (test account now, client account at launch)
- STT / TTS provider per language
- Voice catalogue
- Recording defaults and retention
- Latency and quality alert thresholds

Phase-specific tests and gate criteria

- Latency P50 / P95 measured per language on real test calls
- 50+ scripted test calls per language incl. code-mixed
- Barge-in, transfer (warm / cold / no agent) and voicemail tests
- Provider failover test

- Concurrent-call load test at the target agreed in P0

Deliverables

- Inbound and outbound AI calls
- Transfers to humans
- Recordings, transcripts, summaries
- Call logs

Phase rules (apply to this phase)

- **No hard-coding:** every value introduced in this phase is configurable from Super Admin.
- **Super Admin screens** for this phase are built on our admin template; Django's built-in admin is not used.
- **REST APIs:** every feature of this phase ships with its Django REST API, OpenAPI documentation and API tests, ready for the future Flutter mobile app.
- **Gate exit** only after: tests pass → GitHub CI green → security check passed → no-hard-coding review → staging UAT → client sign-off (Section 4).

PHASE 6

WhatsApp, Website Chat, Appointments, Handoff & Campaigns

Client mapping: Milestone 7: WhatsApp + appointment · Release: **MVP**

Objective

Add the remaining channels and automation: official WhatsApp, the website chat widget, appointment confirmations and reminders, the shared inbox with human takeover, and compliant outbound campaigns.

Scope summary

Area	Features / content
WhatsApp	WA-01 to WA-10, TOOL-09, EMP-08 WhatsApp
Website chat	CHAT-01 to CHAT-07
Appointments	CAL-07, CAL-10
Handoff	HO-01 (chat / WhatsApp), SCORE-05
Records	REC-02
Campaigns	CAMP-01 to CAMP-06
Compliance	COMP-03, COMP-04, COMP-05, COMP-07
Panel	CP-03, CP-07, NOTI-02, NOTI-03, MOB-03

Feature checklist for this phase (46 items, compiled from Section 6)

ID	Feature	Module
EMP-08	Wizard step 7: Connect Tools	M06 AI Employee Management (Company Panel)
TOOL-09	send_whatsapp()	M09 Tools / Actions Framework
CRM-11	Lead detail	M10 CRM & Lead Management (built-in, controlled from Super Admin)
SCORE-05	Hot-lead actions	M11 Lead Scoring
CAL-07	Confirmations & reminders	M13 Calendar & Appointments (built-in)
CAL-10	Notifications to humans	M13 Calendar & Appointments (built-in)
WA-01	Official API only	M15 WhatsApp
WA-02	Connect number	M15 WhatsApp
WA-03	Template management	M15 WhatsApp
WA-04	Automated approved messages	M15 WhatsApp
WA-05	AI replies	M15 WhatsApp
WA-06	Shared inbox	M15 WhatsApp
WA-07	Human handover	M15 WhatsApp
WA-08	Opt-in / opt-out	M15 WhatsApp
WA-09	Voice notes	M15 WhatsApp
WA-10	Delivery tracking & usage	M15 WhatsApp
CHAT-01	Embeddable widget	M16 Website Chat Widget
CHAT-02	Customisation	M16 Website Chat Widget
CHAT-03	Customer actions	M16 Website Chat Widget

ID	Feature	Module
CHAT-04	Lead capture	M16 Website Chat Widget
CHAT-05	Security	M16 Website Chat Widget
CHAT-06	Human takeover	M16 Website Chat Widget
CHAT-07	Lightweight & mobile	M16 Website Chat Widget
HO-01	Handoff triggers	M17 Human Handoff
REC-02	WhatsApp & chat records	M18 Call Transcript, Summary & Conversation Records
CAMP-01	Create campaign	M19 Campaign Management
CAMP-02	Campaign controls	M19 Campaign Management
CAMP-03	Compliance enforcement	M19 Campaign Management
CAMP-04	Live progress	M19 Campaign Management
CAMP-05	Report & export	M19 Campaign Management
CAMP-06	Test mode	M19 Campaign Management
USE-01	Usage metering	M22 Usage Tracking & Billing
SA-10	Voice & channel providers	M23 Super Admin Panel
CP-03	Notifications	M24 Company Panel (General)
CP-06	Settings	M24 Company Panel (General)
CP-07	Mobile-first agent experience	M24 Company Panel (General)
SEC-13	Webhook verification	M25 Security
COMP-03	DND / opt-out check	M26 Compliance & Trust Controls
COMP-04	Calling hours & attempt caps	M26 Compliance & Trust Controls
COMP-05	No unauthorised robocalling	M26 Compliance & Trust Controls
COMP-07	Official WhatsApp API only	M26 Compliance & Trust Controls
NOTI-02	In-app notifications	M27 Notifications & Communication
NOTI-03	Agent alerts	M27 Notifications & Communication
MOB-03	Installable app	M28 Mobile Responsiveness
ENGR-05	Monitoring & alerting	M29 Platform Engineering
API-05	Push notification devices	M30 API-First & Mobile App Readiness

Super Admin controls delivered in this phase

- WhatsApp provider configuration and default templates
- Platform calling limits, hours and attempt caps
- Opt-out keywords
- Notification templates

Phase-specific tests and gate criteria

- WhatsApp template approval, 24-hour window and opt-out behaviour on a test number
- Campaign pacing, retry rules and limit enforcement; opt-out / DND numbers skipped
- Reminder timing tests
- Widget embedded on an external test website
- Handoff E2E on all three channels

Deliverables

- WhatsApp integration and shared inbox
- Website widget
- Campaigns
- Confirmations and reminders

Phase rules (apply to this phase)

- **No hard-coding:** every value introduced in this phase is configurable from Super Admin.
- **Super Admin screens** for this phase are built on our admin template; Django's built-in admin is not used.
- **REST APIs:** every feature of this phase ships with its Django REST API, OpenAPI documentation and API tests, ready for the future Flutter mobile app.
- **Gate exit** only after: tests pass → GitHub CI green → security check passed → no-hard-coding review → staging UAT → client sign-off (Section 4).

PHASE
7

Dashboards, Subscription, Billing, Usage & Super Admin Completion

Client mapping: Milestone 8: Admin + subscription · Release: **MVP**

Objective

Deliver the company dashboard and analytics, Razorpay subscriptions with GST invoices, usage tracking and limits, and the remaining Super Admin modules.

Scope summary

Area	Features / content
Analytics	DASH-01 to DASH-05, EMP-13
Subscription	SUB-03 to SUB-06 (plans data from P1)
Usage	USE-02, USE-03, USE-04, USE-06
Super Admin	SA-02, SA-12, SA-13, SA-14, SA-19, SA-20
Data & support	TEN-07, SEC-12, COMP-09, CP-05, NOTI-01 (billing emails)

Feature checklist for this phase (29 items, compiled from Section 6)

ID	Feature	Module
TEN-07	Data export & deletion	M03 Multi-Tenancy & Data Isolation
EMP-13	Employee analytics	M06 AI Employee Management (Company Panel)
DASH-01	KPI cards	M20 Dashboard & Analytics
DASH-02	Charts	M20 Dashboard & Analytics
DASH-03	Per-employee analytics	M20 Dashboard & Analytics
DASH-04	Campaign analytics	M20 Dashboard & Analytics
DASH-05	Live counters	M20 Dashboard & Analytics
SUB-03	Razorpay subscriptions	M21 SaaS Subscription & Plans
SUB-04	Enterprise plans	M21 SaaS Subscription & Plans
SUB-05	Feature gating	M21 SaaS Subscription & Plans
SUB-06	GST invoices	M21 SaaS Subscription & Plans
USE-01	Usage metering	M22 Usage Tracking & Billing
USE-02	Billing page	M22 Usage Tracking & Billing
USE-03	Limits & alerts	M22 Usage Tracking & Billing
USE-04	Credits	M22 Usage Tracking & Billing
USE-06	Provider cost tracking	M22 Usage Tracking & Billing
SA-02	Platform dashboard	M23 Super Admin Panel
SA-10	Voice & channel providers	M23 Super Admin Panel
SA-13	Billing	M23 Super Admin Panel
SA-14	Usage	M23 Super Admin Panel
SA-19	Support	M23 Super Admin Panel
SA-20	Feature flags	M23 Super Admin Panel

ID	Feature	Module
CP-05	Support	M24 Company Panel (General)
CP-06	Settings	M24 Company Panel (General)
SEC-12	Data deletion controls	M25 Security
SEC-13	Webhook verification	M25 Security
COMP-09	Data privacy	M26 Compliance & Trust Controls
NOTI-01	Transactional emails	M27 Notifications & Communication
ENGR-05	Monitoring & alerting	M29 Platform Engineering

Super Admin controls delivered in this phase

- Plans, prices, limits, overage prices, GST, trial days
- Feature flags
- Credit adjustments
- Support tickets

Phase-specific tests and gate criteria

- Razorpay test mode: subscribe, renew, payment failure, upgrade, downgrade, cancel
- GST invoice correctness (intra-state and inter-state)
- Limit enforcement and alerts
- Usage reconciliation against provider reports
- Dashboard figures match raw data

Deliverables

- Company dashboard
- Subscription and billing
- Usage page
- Complete Super Admin

Phase rules (apply to this phase)

- **No hard-coding:** every value introduced in this phase is configurable from Super Admin.
- **Super Admin screens** for this phase are built on our admin template; Django's built-in admin is not used.
- **REST APIs:** every feature of this phase ships with its Django REST API, OpenAPI documentation and API tests, ready for the future Flutter mobile app.
- **Gate exit** only after: tests pass → GitHub CI green → security check passed → no-hard-coding review → staging UAT → client sign-off (Section 4).

PHASE
8

Hardening, Security, Performance & Production Launch

Client mapping: Milestone 9: Testing + security + deployment · Release: **MVP**

Objective

Prove the platform is secure, fast and recoverable, switch from test to client provider accounts, and launch.

Scope summary

Area	Features / content
Testing	Full regression of P1-P7; UAT with the client's team
Security	External penetration test; DAST; dependency audit; secrets review (SEC-15)
Performance	Load tests at launch targets (ENGR-07)
Reliability	Backup restore drill and DR plan (SEC-10, ENGR-08); alerting tuned
Go-live	Production infrastructure; switch to client's telephony and WhatsApp accounts; runbooks; user, admin and API guides; handover

Feature checklist for this phase (6 items, compiled from Section 6)

ID	Feature	Module
SEC-10	Backups	M25 Security
SEC-15	Security testing	M25 Security
ENGR-03	Environments	M29 Platform Engineering
ENGR-05	Monitoring & alerting	M29 Platform Engineering
ENGR-07	Load & performance testing	M29 Platform Engineering
ENGR-08	Disaster recovery	M29 Platform Engineering

Super Admin controls delivered in this phase

- Production settings review: every configurable value verified in Super Admin, none in code

Phase-specific tests and gate criteria

- Zero open critical / high vulnerabilities
- Load targets met
- Restore drill successful within the RTO
- Client UAT sign-off and go-live approval

Deliverables

- Production launch (MVP live)
- Security and load-test reports
- Runbooks and documentation

Phase rules (apply to this phase)

- **No hard-coding:** every value introduced in this phase is configurable from Super Admin.
- **Super Admin screens** for this phase are built on our admin template; Django's built-in admin is not used.
- **REST APIs:** every feature of this phase ships with its Django REST API, OpenAPI documentation and API tests, ready for the future Flutter mobile app.
- **Gate exit** only after: tests pass → GitHub CI green → security check passed → no-hard-coding review → staging UAT → client sign-off (Section 4).

PHASE 9

Industry Expansion

Client mapping: Post-MVP · Release: **Post-MVP**

Objective

Add the remaining eight industry templates through the template engine. Template content (fields, catalogues, appointment types, instructions, WhatsApp templates) is finalised with the client at the start of the phase.

Scope summary

Area	Features / content
Templates	IND-07, IND-08, CRM-08 and the industry proposals in the table below

Feature checklist for this phase (3 items, compiled from Section 6)

ID	Feature	Module
IND-07	Post-MVP templates	M04 Industry Template Engine
IND-08	Future industries	M04 Industry Template Engine
CRM-08	Automobile fields	M10 CRM & Lead Management (built-in, controlled from Super Admin)

Proposed industry templates (finalised with client at phase start)

Industry	Proposed lead fields	Catalogue	Appointment	Key tools
Automobile	Car Model, Budget, Variant, Test Drive (client-specified); Fuel type, Finance needed, Exchange vehicle	Models / variants / prices	Test Drive	search_vehicle, book_test_drive
Hotels	Check-in, Check-out, Guests, Room type, Budget	Rooms and rates	Booking enquiry	check_room_availability, create_booking_enquiry
E-commerce	Order number, Product interest, Issue type	Products	—	search_product, get_order_status, create_ticket
Logistics	Pickup city, Drop city, Shipment type, Weight, Tracking number	Services and rates	Pickup slot	get_shipment_status, create_quote_request
Clinics / Healthcare	Patient name, Age, Department / doctor, Preferred date (no diagnosis fields)	Doctors and services	Doctor appointment	book_appointment; guardrail: no medical advice
B2B Services	Company, Designation, Requirement, Budget, Timeline	Services	Meeting / demo	book_meeting
Salons / Beauty	Service, Stylist preference, Preferred date and time	Services and price list	Salon appointment	book_appointment
Restaurants	Party size, Date and time, Occasion, Dietary preference	Menu	Table reservation	book_table

Super Admin controls delivered in this phase

- All eight templates are created and published from Super Admin

Phase-specific tests and gate criteria

- AI evaluation suite per new template and language
- New templates added without changing the core engine (only new tool handlers where an industry needs a new action)

Deliverables

- Eight additional live industry templates

Phase rules (apply to this phase)

- **No hard-coding:** every value introduced in this phase is configurable from Super Admin.
- **Super Admin screens** for this phase are built on our admin template; Django's built-in admin is not used.
- **REST APIs:** every feature of this phase ships with its Django REST API, OpenAPI documentation and API tests, ready for the future Flutter mobile app.
- **Gate exit** only after: tests pass → GitHub CI green → security check passed → no-hard-coding review → staging UAT → client sign-off (Section 4).

PHASE
10

Additional AI Employee Types & Custom Roles

Client mapping: Post-MVP · Release: **Post-MVP**

Objective

Add the Customer Support and Collection / Reminder employees, the ticketing and receivables modules they need, an external API connector, and the custom role builder.

Scope summary

Area	Features / content
Roles	ROLE-06, ROLE-07, ROLE-08
Tools	TOOL-10, TOOL-11, TOOL-12
Compliance	COMP-08
Support tickets	Ticket ID, Customer, Subject, Description, Channel, Priority, Status (Open, In Progress, Waiting on Customer, Resolved, Closed), Assignee, Conversation link, Timestamps
Receivables (collection)	Customer, Reference, Amount, Due date, Status, Reminders sent, Promise-to-pay date, Escalation

Feature checklist for this phase (7 items, compiled from Section 6)

ID	Feature	Module
ROLE-06	AI Customer Support Employee	M05 AI Employee Roles
ROLE-07	AI Collection / Reminder Employee	M05 AI Employee Roles
ROLE-08	Custom role builder	M05 AI Employee Roles
TOOL-10	create_ticket()	M09 Tools / Actions Framework
TOOL-11	get_order_status()	M09 Tools / Actions Framework
TOOL-12	External API connector	M09 Tools / Actions Framework
COMP-08	Collection role restrictions	M26 Compliance & Trust Controls

Super Admin controls delivered in this phase

- Role availability per plan
- Collection enablement per company
- Connector security settings

Phase-specific tests and gate criteria

- Ticket lifecycle
- Connector security (outbound request allowlist, timeouts)
- Collection guardrails: tone, timing, opt-out

Deliverables

- Support and Collection AI Employees
- Custom role builder
- External API connector

Phase rules (apply to this phase)

- **No hard-coding:** every value introduced in this phase is configurable from Super Admin.
- **Super Admin screens** for this phase are built on our admin template; Django's built-in admin is not used.
- **REST APIs:** every feature of this phase ships with its Django REST API, OpenAPI documentation and API tests, ready for the future Flutter mobile app.
- **Gate exit** only after: tests pass → GitHub CI green → security check passed → no-hard-coding review → staging UAT → client sign-off (Section 4).

PHASE
11

Language Expansion

Client mapping: Post-MVP · Release: **Post-MVP**

Objective

Add Urdu, Marathi, Gujarati, Tamil, Telugu, Kannada, Malayalam, Punjabi and further Indian languages on request, each through Super Admin configuration plus a quality bake-off.

Scope summary

Area	Features / content
Languages	VOICE-20 applied per language: provider bake-off, voices, greetings and disclosure, AI evaluation set

Feature checklist for this phase (1 items, compiled from Section 6)

ID	Feature	Module
VOICE-20	Add languages without code	M14 Voice AI

Super Admin controls delivered in this phase

- Language records, STT / TTS mapping, voices and texts

Phase-specific tests and gate criteria

- Per-language quality score ≥ the threshold agreed in P0
- Latency target met per language

Deliverables

- Eight or more additional production languages

Phase rules (apply to this phase)

- **No hard-coding:** every value introduced in this phase is configurable from Super Admin.
- **Super Admin screens** for this phase are built on our admin template; Django's built-in admin is not used.
- **REST APIs:** every feature of this phase ships with its Django REST API, OpenAPI documentation and API tests, ready for the future Flutter mobile app.
- **Gate exit** only after: tests pass → GitHub CI green → security check passed → no-hard-coding review → staging UAT → client sign-off (Section 4).

PHASE
12

Advanced Billing & Analytics

Client mapping: Post-MVP · Release: **Post-MVP**

Objective

Complete usage-based billing and advanced reporting.

Scope summary

Area	Features / content
Billing	USE-05: pay-as-you-go, credit top-ups, overage invoicing
Analytics	DASH-06: agent performance, funnels, AI quality metrics, scheduled reports, exports

Feature checklist for this phase (2 items, compiled from Section 6)

ID	Feature	Module
DASH-06	Advanced analytics	M20 Dashboard & Analytics
USE-05	Usage-based billing	M22 Usage Tracking & Billing

Super Admin controls delivered in this phase

- Usage pricing, top-up packs, report schedules

Phase-specific tests and gate criteria

- Billing reconciliation
- Report accuracy against raw data

Deliverables

- Usage-based billing
- Advanced analytics

Phase rules (apply to this phase)

- **No hard-coding:** every value introduced in this phase is configurable from Super Admin.
- **Super Admin screens** for this phase are built on our admin template; Django's built-in admin is not used.
- **REST APIs:** every feature of this phase ships with its Django REST API, OpenAPI documentation and API tests, ready for the future Flutter mobile app.
- **Gate exit** only after: tests pass → GitHub CI green → security check passed → no-hard-coding review → staging UAT → client sign-off (Section 4).

8. Templates & Section Mapping

Both purchased templates are in the project folder and already come as Django projects. This section records how they are used, so development starts without a separate UI/UX phase.

Item	Decision
Theme	Light, for website and both panels
Website	WebsiteTemplate / eSoft: Bootstrap 5, jQuery, GSAP + ScrollTrigger, AOS. Base design: HR layout (index5)
Panels	AdminTemplate / Rizz: Bootstrap 5.3, light / dark ready. Used for Super Admin and company panel
Technology	Django templates (no Next.js); our own Django 5.2 project, templates copied in under website/ and panel/
Not used	Template Docs folders, demo databases, RTL and extra locales, unused demo home pages, UI-kit showcase pages

8.1 Website: HR Layout (index5) Sections

Every section below gets a Super Admin editor (WEB-04): headings, text, images, icons, buttons, items, order and show / hide. Source column shows where the design comes from.

#	Website section	Source in eSoft	Our content
1	Header / menu	index5 header (made a shared partial)	Logo, menu items, Login / Get Started buttons
2	Hero	index5 Hero	"Hire an AI Employee for your business", CTA buttons, hero image
3	Work	index5 Work	What an AI Employee does (calls, WhatsApp, CRM, appointments)
4	Counters	index5 Counters	Key numbers (companies, calls handled, languages …)
5	Work process	index5 Work Process	How it works: register → create AI Employee → connect → activate
6	System	index5 System	Platform features (voice, WhatsApp, chat, CRM, calendar, campaigns)
7	Solution	index5 HR Solution	AI Employee types / industries
8	Testimonials	index5 Testimonials	Customer reviews
9	Pricing	eSoft pricing page section (restyled)	Plans read live from Super Admin
10	Industries	Feature-card section from another eSoft demo (restyled)	Active industry templates, read live
11	FAQ	FAQ section from another eSoft demo (restyled)	Questions and answers
12	Call to action	eSoft CTA partial (restyled)	Final sign-up call to action
13	Footer	index5 footer (made a shared partial)	Columns, links, contact, social, copyright (General Settings)

Inner pages from eSoft, all using the index5 header and footer: About, Features, Pricing, Contact, Testimonials, Blog (optional), Legal pages, and the account pages Login, Register, Forgot, Reset, Verify Email, Success.

8.2 Panels: Rizz Pages Reused

Rizz page	Used for
Dashboard / analytics	Company dashboard (DASH), Super Admin platform dashboard (SA-02)
Datatables / editable tables	Leads, calls, campaigns, companies, users, invoices lists
Contact list	Leads list (card view)

Rizz page	Used for
Kanban board	Lead pipeline (CRM-10)
Calendar	Built-in calendar and appointments (CAL)
Chat	WhatsApp and website-chat shared inbox (WA-06, CHAT-06)
Form wizard	Create AI Employee wizard (EMP-02 to EMP-11)
Forms, uploads, image crop, editors	Settings, knowledge uploads, logo / favicon, website section editors
Pricing, invoice	Plans, billing page, GST invoices
Notifications, profile, timeline	Notification centre, user profile, lead timeline
Auth pages (login, register, recover, lock)	Panel login, 2FA, password recovery
Email templates	Transactional email designs

9. Pending Features

AI Marketing Employee: pending client definition

- Listed by the client in §31 as part of the long-term vision.
- Its responsibilities have not been defined in the brief.
- It is parked: not designed, not estimated and not scheduled until the client provides a definition.
- When defined, it will be added as a role template (M05) on the same engine, with its own phase and gate.

Future: Flutter mobile app (Android + iOS)

- Planned as a separate future project; not in the current scope or estimate.
- Because every section is built with REST APIs (Rule 8, module M30), the app will connect to the same system with the same data and workflows.
- Only the mobile design and app-side code will need to be written; the backend is already in place.

10. Requirement Traceability Matrix

Every section of the client brief mapped to feature IDs and phases.

Client §	Requirement	Feature IDs	Phase(s)
§1	Core product concept & user journey	WEB-05, AUTH-01, AUTH-10, EMP-01 to EMP-11	P1, P4
§2	Multi-industry platform	IND-01 to IND-08, CAT-01, ENG-01, ENG-02	P3, P4, P9
§3	AI Employee types	ROLE-01 to ROLE-09	P3, P4, P10, Pending
§4	Voice AI	VOICE-01 to VOICE-22, COMP-01 to COMP-05	P5, P6
§5	Voice conversation engine	VOICE-03 to VOICE-06, ENG-06, ENG-07	P4, P5
§6	Knowledge base	KB-01 to KB-11, ENG-04, TEN-04	P4
§7	AI tools / actions	TOOL-01 to TOOL-15	P4, P5, P6, P10
§8	CRM	CRM-01 to CRM-18	P3
§9	Dynamic custom fields	CRM-04 to CRM-08	P3, P9
§10	Lead scoring	SCORE-01 to SCORE-06	P3, P4, P6
§11	Real Estate template	CAT-02 to CAT-04, CRM-05, TOOL-15, CAL-04	P3, P4
§12	Travel template	CAT-05, CRM-06, TOOL-15	P3, P4
§13	Education template	CAT-06, CRM-07, TOOL-15	P3, P4
§14	WhatsApp	WA-01 to WA-10	P6
§15	Website AI chat	CHAT-01 to CHAT-07	P6
§16	Human handoff	HO-01 to HO-05	P5, P6
§17	Call transcript & summary	REC-01 to REC-03, VOICE-12 to VOICE-14	P5, P6
§18	Campaign management	CAMP-01 to CAMP-06	P6
§19	Dashboard	DASH-01 to DASH-05	P7
§20	AI Employee management	EMP-01, EMP-12, EMP-13	P4, P7
§21	Create AI Employee wizard	EMP-02 to EMP-11	P4, P5, P6
§22	Super Admin panel	SA-01 to SA-27	P1 to P7
§23	SaaS subscription	SUB-01 to SUB-06	P1, P7
§24	Usage billing	USE-01 to USE-06	P4 to P7, P12
§25	Security	SEC-01 to SEC-15, TEN-01 to TEN-07	P1 to P8
§26	Mobile responsive	MOB-01 to MOB-03, WEB-08, CP-07	All phases
§27	Technology	SDD-02 (architecture), ENG-09, VOICE-21	P0
§28	MVP scope	Phases P0 to P8	P0 to P8
§29	Testable milestones	Phase gates (Section 4)	All phases
§30	Pre-development deliverables	Section 11 of this document	P0
§31	Business goal & positioning	WEB-01, ENG-01, ROLE-01 to ROLE-09	All phases
§32	Multi-tenant, modular, scalable	TEN-01 to TEN-07, SDD-02	All phases
DEC	API-first for the future Flutter mobile app	API-01 to API-08	All phases, Future

11. Pre-Development Deliverables (Client §30)

The client requested 17 items before development starts. Where each is delivered:

#	Requested item	Delivered in
1	Complete UI/UX design	Not required (agreed with client): development uses the website and admin templates supplied by our team
2	Complete technical architecture	SDD-02 System Design & Architecture
3	Database architecture	SDD-02, Data Architecture
4	API architecture	SDD-02, API Architecture
5	AI architecture	SDD-02, AI Architecture
6	Voice architecture	SDD-02, Voice Architecture
7	Industry template architecture	SDD-02, Industry Template Engine
8	Complete feature list	This document, Section 6
9	Development timeline	Commercial proposal
10	Fixed development cost	Commercial proposal (one-time development cost)
11	Third-party API costs	Commercial proposal (after Phase 0 provider selection)
12	Estimated monthly running cost	Commercial proposal (monthly running / API cost)
13	Cloud / hosting cost	Commercial proposal
14	Maintenance cost	Commercial proposal
15	Security plan	SDD-02 Security Architecture + this document M25 and Section 4
16	Deployment plan	SDD-02 Infrastructure & Deployment
17	Testing plan	This document Section 4 + SDD-02 Testing Strategy

Cost presentation (as requested by the client)

- **One-time development cost**, **monthly running / API cost** and **optional future features** are shown separately in the commercial proposal.
